Astm Aisi Cross Reference Guide:

Worldwide Guide to Equivalent Nonferrous Metals and Alloys Fran Cverna, 2001-01-01 This latest edition incorporates the many changes in the specifications and designations of nonferrous alloys that have occurred over the past five years. The volume features over 20 000 alloy designations including a complete listing of UNS designations for nonferrous alloys and comprehensive treatment of current European and Japanese standards. It covers more countries, more alloys and more standards than previous editions while keeping obsolete designations for those persons trying to duplicate equipment from old documents. This comprehensive volume is well indexed with easy to use cross references that make short work of looking up equivalents for a material specification or designation. It provides valuable composition tables that allow you to compare similar alloys. Tensile properties and product forms are provided when available. **ASM Metals Reference Book**, 1983

Heat Treater's Guide Harry Chandler, 1994-12-31 This edition is a complete revision and contains a great deal of new subject matter including information on ferrous powder metallurgy, cast irons, ultra high strength steels, furnace atmospheres, quenching processes, SPC and computer technology. Data on over 135 additional irons and steels have been added to the previously covered 280 alloys. *Tool Steels* Rafael A. Mesquita, 2016-12-19 This handy book provides a single up to date source of information for increasing the life of tool steels through optimized design and manufacturing. Supplying a solid understanding of the metallurgy involved, the text explains how material compositions, manufacturing processes, heat treatments, surface hardening techniques and coatings affect tool steel properties, grades and performance. It also explores real life case studies and failure analyses offering examples of die life parameters and hints for modifying tool steels and heat treatments during cutting or forming processes. While the book offers deep coverage of properties, microstructure and manufacturing, its focus is on describing the performance of each application of this special class of ferrous materials. Provides a single up to date source of information for increasing the life of tool steels through optimized design and manufacturing. Explains how material compositions, manufacturing processes, heat treatments, surface hardening techniques and coatings affect tool steel properties, grades and performance. Supplies a solid understanding of the metallurgy involved in tool steel manufacturing, machining, hot and cold working and molding. Offers examples of die life parameters and hints for modifying tool steels and heat treatments during cutting or forming processes. Includes real life case studies and failure analyses from the Villares Metals plant in Brazil. **Corrosion and Protection of Materials** Marina Cabrini, 2021-04-06 This book contains thirty articles on various topics related to the corrosion and protection of metallic materials. This topic is of strong actuality both due to the aging of plants and infrastructures that require checks and maintenance and to the use of traditional materials in increasingly aggressive environments, added to the need of changing the current anti corrosion systems with less environmental impact methods. Finally, the new development of innovative materials such as additive manufacturing or high entropy alloys needs the characterization of their corrosion behavior. In this issue there are works on

new alloys obtained for additive manufacturing or high entropy on the study of corrosion and stress corrosion cracking and hydrogen embrittlement mechanisms through electrochemical and microscopical techniques studies on low environmental impact inhibitors and biocides as well as ceramic and metal protective coatings Finally there are works on the study of the residual mechanical resistance of corroded infrastructures and on monitoring and non destructive control In this way the book therefore offers a somewhat varied panorama of research trends in the field Steel Heat Treatment Handbook
George E. Totten, Maurice A.H. Howes, 1997-02-21 This comprehensive resource provides practical modern approaches to steel heat treatment topics such as sources of residual stress and distortion hardenability prediction modeling effects of steel alloy chemistry on heat treatment quenching carburizing nitriding vacuum heat treatment metallography and process equipment Containing recent data and developments from international experts the Steel Treatment Handbook discusses the principles of heat treatment quenchants quenching systems and quenching technology strain gauge procedures X ray diffraction and other residual stress measurement methods carburizing and carbonitriding powder metallurgy technology metallography and physical property determination ecological regulations and safety standards and more Well illustrated with nearly 1000 tables equations figures and photographs the Steel Heat Treatment Handbook is an excellent reference for materials manufacturing heat treatment maintenance mechanical industrial process and quality control design and research engineers department or corporate metallurgists and upper level undergraduate and graduate students in these disciplines
