Optimal Control of the Machine Repair Problem with Removable Repairman Subject to Working Breakdowns
Tseng-Chang Yen,Haitao Wu,Kuo-Hsiung Wang,Wen-Kuang Chou,2014 This paper deals with a single removable repairman in the machine repair problem with warm standbys and working breakdowns We assume that the repairman can be subject to working breakdowns only when there is at least one failed machine in the system Applying the matrix analytic method we develop the steady state probabilities of the number of failed machines in the system as well as several system performance measures We construct a cost model to compute the optimal threshold N and the joint optimal values for the fast and slow service rates simultaneously by a two stage optimization method whose effectiveness is proved by numerical results Moreover we also analyze the sensitivity with numerical illustrations based on different system parameter values
