

Intercontinental Fuselage

Intercontinental Fuselage

The fuselage is a semimonocoque structure formed from circumferential frames, longitudinal stringers, and skin with fail-safe straps that act as tear stoppers. The fuselage is divided horizontally by two floors forward and one floor aft, which are built up from beams and panels. The entire fuselage from STA 140 to STA 2360 is pressurized except for the nose gear and main landing gear wheelwells and the center wingbox structure.

FUSELAGE SECTIONS

Section 41 forward has the radar antenna behind a fiberglass radome fairing, hinged at the side. Aft of the pressure bulkhead on the main floor is the forward passenger cabin. Above the pilot floor is the flight deck and the forward part of the upper deck passenger cabin. Below the main floor are the nose gear wheel

well and the electrical/electronic Main Equipment Center (MEC). The section has one lower access door and two forward passenger doors. A crew emergency hatch is in the overhead of the flight deck.

Section 42 has passenger cabins above both floors and the forward cargo compartment below the main floor. The cargo compartment section has these doors:

- One lower access door
- One cargo compartment door
- Two passenger doors on the main floor
- Two emergency doors on the upper deck.

Section 44 is the center portion of the passenger cabin. It has two passenger doors. The space below the main floor includes these:

- Wingbox section (fuel tank)

- Three air conditioning equipment bays
- Two wing gear and two body gear wheel wells.

Section 46 is the aft portion of the passenger cabin. Below the main floor are the aft cargo and bulk cargo compartments. This section has two cargo compartment doors and four passenger cabin doors. It stops at the aft pressure bulkhead.

Section 48 has the horizontal stabilizer center section. Intercontinental fuel tank and the Auxiliary Power Unit (APU). Access to the horizontal and vertical stabilizers is through a lower access hatch in this section. Access to the APU is through APU compartment doors.

Extension plugs have been added and have a location description STA 740+0 to 740+160 and 1480+0 to 1480+60.

Gregg Stebben

Boeing 747 400 Pilot Systems Manual:

The Man's Manual Gregg Stebben, 2008-06-17 Every man needs to know how to flirt with a waitress right And how to make sure beer is part of every meal not just breakfast And how to work out to actually get a workout Now all this information and less manly but no less essential tips can be found in one place The only book a man needs to lead a well rounded life The Man's Manual provides instruction on inspirational sex urban tenting what to do to with your thumb after you whack it with a hammer and much much more Here are succinct step by step directions for impersonating a smart person and landing an airplane safely Learn to tie a bowtie fight cancer consume green tea and tomatoes but not necessarily at the same time and organize a poker game Determine how exactly to become a sex object how to talk lingerie and how to make love like a pro There is material on baking brownies cooking geese and even hunting down your own venison The sheer amount of information contained in this friendly accessible book will enchant even the most discriminating reader

Aviation Automation Charles E. Billings, 2018-01-29 The advent of very compact very powerful digital computers has made it possible to automate a great many processes that formerly required large complex machinery Digital computers have made possible revolutionary changes in industry commerce and transportation This book an expansion and revision of the author's earlier technical papers on this subject describes the development of automation in aircraft and in the aviation system its likely evolution in the future and the effects that these technologies have had and will have on the human operators and managers of the system It suggests concepts that may be able to enhance human machine relationships in future systems The author focuses on the ability of human operators to work cooperatively with the constellation of machines they command and control because it is the interactions among these system elements that result in the system's success or failure whether in aviation or elsewhere Aviation automation has provided great social and technological benefits but these benefits have not come without cost In recent years new problems in aircraft have emerged due to failures in the human machine relationship These incidents and accidents have motivated this inquiry into aviation automation Similar problems in the air traffic management system are predicted as it becomes more fully automated In particular incidents and accidents have occurred which suggest that the principle problems with today's aviation automation are associated with its complexity coupling autonomy and opacity These problems are not unique to aviation they exist in other highly dynamic domains as well The author suggests that a different approach to automation called human centered automation offers potential benefits for system performance by enabling a more cooperative human machine relationship in the control and management of aircraft and air traffic

Federal Register, 2008-07-17 *Automation and Human Performance* Raja Parasuraman, Mustapha Mouloua, 2018-01-29 There is perhaps no facet of modern society where the influence of computer automation has not been felt Flight management systems for pilots diagnostic and surgical aids for physicians navigational displays for drivers and decision aiding systems for air traffic controllers represent only a few of the numerous domains in which powerful new

automation technologies have been introduced The benefits that have been reaped from this technological revolution have been many At the same time automation has not always worked as planned by designers and many problems have arisen from minor inefficiencies of operation to large scale catastrophic accidents Understanding how humans interact with automation is vital for the successful design of new automated systems that are both safe and efficient The influence of automation technology on human performance has often been investigated in a fragmentary isolated manner with investigators conducting disconnected studies in different domains There has been little contact between these endeavors although principles gleaned from one domain may have implications for another Also with a few exceptions the research has tended to be empirical and only theory driven In recent years however various groups of investigators have begun to examine human performance in automated systems in general and to develop theories of human interaction with automation technology This book presents the current theories and assesses the impact of automation on different aspects of human performance Both basic and applied research is presented to highlight the general principles of human computer interaction in several domains where automation technologies are widely implemented The major premise is that a broad based theory driven approach will have significant implications for the effective design of both current and future automation technologies This volume will be of considerable value to researchers in human
