Stochastic and Statistical Methods in Hydrology and Environmental Engineering Keith W. Hipel, 2012-12-06 Objectives The current global environmental crisis has reinforced the need for developing flexible mathematical models to obtain a better understanding of environmental problems so that effective remedial action can be taken Because natural phenomena occurring in hydrology and environmental engineering usually behave in random and probabilistic fashions stochastic and statistical models have major roles to play in the protection and restoration of our natural environment Consequently the main objective of this edited volume is to present some of the most up to date and promising approaches to stochastic and statistical modelling especially with respect to groundwater and surface water applications Contents As shown in the Table of Contents the book is subdivided into the following main parts GENERAL ISSUES PART I PART II GROUNDWATER PART III SURFACE WATER PART IV STOCHASTIC OPTIMIZATION PART V MOMENT ANALYSIS PART VI OTHER TOPICS Part I raises some thought provoking issues about probabilistic modelling of hydro logical and environmental systems The first two papers in Part I are in fact keynote papers delivered at an international environmetrics conference held at the University of Waterloo in June 1993 in honour of Professor T E Unny In

his keynote paper Dr S J Burges of the University of Washington places into perspective the historical and future roles of stochastic modelling in hydrology and environmental engineering Additionally Dr Burges stresses the need for developing a sound scientific basis for the field of hydrology Professor P E *Transmission Network Investment in Liberalized Power Markets* Mohammad Reza Hesamzadeh, Juan Rosellón, Ingo Vogelsang, 2020-09-10 This book provides a systematic overview of transmission network investment in liberalized power markets Recent government policies to increase the share of intermittent renewable power generation and other technological innovations present new theoretical as well as practical challenges for transmission investments Written by experts with a background in both economics and engineering the book examines the economic and technical fundamentals of regulated and merchant transmission investment and includes case studies of transmission investment in a number of countries The book is divided into four parts Part 1 introduces the basic economics and engineering of transmission network investment while Part 2 discusses merchant investment in the transmission network Part 3 then examines transmission investment coordination and smart grids and lastly Part 4 describes practical experiences of transmission network investment in power market in various countries **Optimization in Engineering** Ramteen Sioshansi, Antonio J. Conejo, 2017-06-24 This textbook covers the fundamentals of optimization including linear mixed integer linear nonlinear and dynamic optimization techniques with a clear engineering focus It carefully describes classical optimization models and algorithms using an engineering problem solving perspective and emphasizes modeling issues using many real world examples related to a variety of application areas Providing an appropriate blend of practical applications and optimization theory makes the text useful to both practitioners and students and gives the reader a good sense of the power of optimization and the potential difficulties in applying optimization to modeling real world systems The book is intended for undergraduate and graduate level teaching in industrial engineering and other engineering specialties It is also of use to industry practitioners due to the inclusion of real world applications opening the door to advanced courses on both modeling and algorithm development within the industrial engineering and operations research fields *Optimization in Science and Engineering* Themistocles M. Rassias, Christodoulos A. Floudas, Sergiy Butenko, 2014-05-29 Optimization in Science and Engineering is dedicated in honor of the 60th birthday of Distinguished Professor Panos M Pardalos Pardalos's past and ongoing work has made a significant impact on several theoretical and applied areas in modern optimization As tribute to the diversity of Dr Pardalos's work in Optimization this book comprises a collection of contributions from experts in various fields of this rich and diverse area of science Topics highlight recent developments and include Deterministic global optimization Variational inequalities and equilibrium problems Approximation and complexity in numerical optimization Non smooth optimization Statistical models and data mining Applications of optimization in medicine energy systems and complex network analysis This volume will be of great interest to graduate students researchers and practitioners in the fields of optimization and engineering **Control and**
