The Boundaries of Data Bart Sloot, Sascha Schendel, 2025-10-01 The legal domain distinguishes between different types of data and attaches a different level of protection to each of them Thus non personal data are left largely unregulated while privacy and data protection rules apply to personal data or personal information There are stricter rules for processing sensitive personal data than for ordinary personal data and metadata or

communications data are regulated differently than content communications data. Technological developments challenge these legal categorisations on at least three fronts. First the lines between the categories are becoming harder to draw and more fluid. Second working with various categories of data works well when the category a datum or dataset falls into is relatively stable. However this is less and less so. Third scholars increasingly question the rationale behind the various legal categorisations. This book assesses to what extent either of these strategies is feasible and to what extent alternative approaches could be developed by combining insights from three fields: technology, practice and law.
