Basil Bernstein, 2000 **Basil Bernstein, Code Theory, and Education** Parlo Singh, 2020-11-25 Over a career spanning forty years Basil Bernstein produced theoretical models about the workings of educational systems and how these systems produce social relations of

inequality He was considered by many to be a radical scholar whose work generated enormous controversies One such controversy was around code theory specifically restricted and elaborated codes which came to signify for some scholars the deficit views of those living in poverty Bernstein weathered the intensity of the debates around these ideas spending much of his career vehemently challenging deficit portrayals of code theory reworking and extending his theoretical corpus with the development of ideas around pedagogic discourse and identity The past decade has witnessed a revival of interest in Bernstein's theoretical ideas across fields as diverse as policy studies sociology of education curriculum and pedagogy studies anthropology linguistics and social and cultural psychology This book contributes to the revival of Bernstein's work by examining specifically some women's contribution to this theoretical corpus The contributions traverse a number of disciplines building a rich tapestry of concepts to think about education systems and the formation of social minds Significantly the book tackles the complex matter of how to empirically work with Bernstein's ideas and so contribute to debates about the nexus between theory and methods The chapters in this book were originally published as articles in Taylor Francis journals or previously published in Taylor Francis books *Pedagogic Rights and Democratic Education* Philippe Vitale, Beryl Exley, 2015-07-24 The basis of Bernstein's sociology of education lays in his theorisation of the different approaches to curriculum pedagogy and assessment and the implications for pedagogic rights and social justice This edited collection presents 15 empirical case studies and theoretical accounts from 22 international scholars who focus on the experiences of students and teachers in contexts marked by economic social cultural linguistic and or geographic diversity Located in systems of education in Australia France Germany Greece Portugal South Africa and the United States each chapter contributes to a better understanding of the conditions of a democratic education across time and place

Knowledge-building Karl Maton, Susan Hood, Suellen Shay, 2015-10-08 Education and knowledge have never been more important to society yet research is segmented by approach methodology or topic Legitimation Code Theory or LCT extends and integrates insights from Pierre Bourdieu and Basil Bernstein to offer a framework for research and practice that overcomes segmentalism This book shows how LCT can be used to build knowledge about education and society Comprising original papers by an international and multidisciplinary group of scholars Knowledge building offers the first primer in this fast growing approach Through case studies of major research projects Part I provides practical insights into how LCT can be used to build knowledge by enabling dialogue between theory and data in qualitative research bringing together quantitative and qualitative methodologies in mixed methods research relating theory and practice in praxis conducting interdisciplinary studies with systemic functional linguistics Part II offers a series of studies of pressing issues facing knowledge building in education and beyond encompassing diverse subject areas including physics English cultural studies music and design educational sites schooling vocational education and higher education practices of research curriculum pedagogy and assessment both education and informal learning contexts such as museums and masonic lodges Carefully sequenced and

interrelated these chapters form a coherent collection that gives a unique insight into one of the most thought provoking and innovative ways of building knowledge about knowledge building in education and society to have emerged this century This book is essential reading for all serious students and scholars of education sociology and linguistics *Towards Powerful Educational Knowledge* Jim Hordern, Johan Muller, Deng Zongyi, 2024-04-11 This book explores what constitutes valid or powerful educational knowledge and the role of educational theorising in questions of educational practice It examines the challenges facing the deliberative educational knowledge traditions of educational foundations curriculum theory and Didaktik as a consequence of the rising tide of empiricism in educational research the what works agenda in global educational reform and internal fragmentation within the traditions themselves By examining the potential for the reconfiguration or reconstruction of these traditions the book explores the possibility of reinvigorating deliberative educational theorising in ways that could provide a meaningful basis for educators to conceptualise their practice and a robust response to policies that seek to narrow educational activity to a focus solely on learning outcomes and technical efficiency This insightful volume will be of interest to all those concerned about the future of education and particular the relationship between educational theory and educational practice in curriculum studies teacher education and professional development It will be a key resource for teachers curriculum developers policy makers and researchers in the field of curriculum theory and didactics The book was originally published as a special issue of Journal of Curriculum Studies

Grading Student Midwives' Practice Sam Chenery-Morris, 2020-12-30 This book investigates the education and assessment of student midwives in clinical practice paying particular attention to how their practice is graded Chenery Morris brings primary research which explores students mentors and midwifery lecturers perspectives of practice learning and its assessment together with the international literature on clinical knowledge teaching and learning in practice and assessment of students drawn from a range of healthcare and education professions Discussing how practice is graded what constitutes valid practice knowledge learning in clinical practice evaluating practice learning and failing students this book uses Basil Bernstein s theories to throw light on how we assess and whether we should assess performance in addition to whether a student is competent to practise This is an important contribution to the field of midwifery education It will also be relevant to those with an interest in practice education from a range of healthcare professions *Knowledge and Knowers* Karl Maton, 2013-09-11 We live in knowledge societies and work in knowledge economies but accounts of social change treat knowledge as homogeneous and neutral While knowledge should be central to educational research it focuses on processes of knowing and condemns studies of knowledge as essentialist This book unfolds a sophisticated theoretical framework for analysing knowledge practices Legitimation Code Theory or LCT By extending and integrating the influential approaches of Pierre Bourdieu and Basil Bernstein LCT offers a practical means for overcoming knowledge blindness without succumbing to essentialism or relativism Through detailed studies of pressing issues in education the book sets out the multi dimensional

conceptual toolkit of LCT and shows how it can be used in research Chapters introduce concepts by exploring topics across the disciplinary and institutional maps of education how to enable cumulative learning at school and university the unfounded popularity of student centred learning and constructivism the rise and demise of British cultural studies in higher education the positive role of canons proclaimed revolutions in social science the two cultures debate between science and humanities how to build cumulative knowledge in research the unpopularity of school Music how current debates in economics and physics are creating major schisms in those fields LCT is a rapidly growing approach to the study of education knowledge and practice and this landmark book is the first to systematically set out key aspects of this theory It offers an explanatory framework for empirical research applicable to a wide range of practices and social fields and will be essential reading for all serious students and scholars of education and sociology Knowledge and the Future of the Curriculum B. Barrett, E. Rata, 2014-10-28 This collection explores why powerful knowledge matters for social justice and discusses its implications for curriculum and pedagogy The contributors argue that the purpose of education is to provide all students with access to powerful knowledge so that they acquire the means to move beyond their experiences and enhance their lives
