approaches this book seeks to cultivate a positive attitude toward the teaching profession while equipping students with practical skills to enhance their teaching effectiveness. Structured into three comprehensive chapters, the book covers the teaching learning process, methods of teaching, and the use of teaching aids alongside lesson planning. Each chapter is designed to build on the previous one, creating a cohesive learning experience that aligns with the course objectives. The content is presented in a clear and accessible manner with practical examples and theoretical insights that cater to both novice and experienced learners. The inclusion of modern tools like EDUSAT, e-learning, and virtual classrooms reflects the book's commitment to preparing students for the technological advancements shaping education today. This book is not merely a compilation of theories but a guide to inspire and empower future educators. It is my hope that readers will find it a valuable companion in their journey to becoming reflective, innovative, and impactful teachers. I extend my gratitude to the Department of Education at Bodoland University for their support and encouragement in developing this text. May this book serve as a beacon for those dedicated to the noble pursuit of education.

NABE Review of Research and Practice

Virginia Gonzalez, 2004 Interactive Task Learning Kevin A. Gluck, John E. Laird, 2019-09-10

Experts from a range of disciplines explore how humans and artificial agents can quickly learn completely new tasks through natural interactions with each other. Humans are not limited to a fixed set of innate or preprogrammed tasks. We learn quickly through language and other forms of natural interaction, and we improve our performance and teach others what we have learned. Understanding the mechanisms that underlie the acquisition of new tasks through natural interaction is an ongoing challenge. Advances in artificial intelligence, cognitive science, and robotics are leading us to future systems with human-like capabilities. A huge gap exists, however, between the highly specialized, niche capabilities of current machine learning systems and the generality, flexibility, and in situ robustness of human instruction and learning. Drawing on expertise from multiple disciplines, this Strüngmann Forum Report explores how humans and artificial agents can quickly learn completely new tasks through natural interactions with each other. The contributors consider functional knowledge requirements, the ontology of interactive task learning, and the representation of task knowledge at multiple levels of abstraction. They explore natural forms of interactions among humans as well as the use of interaction to teach robots and software agents new tasks in complex, dynamic environments. They discuss research challenges and opportunities, including ethical considerations, and make proposals to further understanding of interactive task learning and create new capabilities in assistive robotics, healthcare, education, training, and gaming.
