Automatic Simd Vectorization Of Ssa Based Control Flow Graphs:

Automatic SIMD Vectorization of SSA-based Control Flow Graphs Ralf Karrenberg,2015-06-12 Ralf Karrenberg presents Whole Function Vectorization WFV an approach that allows a compiler to automatically create code that exploits data parallelism using SIMD instructions Data parallel applications such as particle simulations stock option price estimation or video decoding require the same computations to be performed on huge amounts of data Without WFV one processor core executes a single instance of a data parallel function WFV transforms the function to execute multiple instances at once using SIMD instructions The author describes an advanced WFV algorithm that includes a variety of analyses and code generation techniques He shows that this approach improves the performance of the generated code in a variety of use cases
