

# Introduction to Numerical Analysis

## 1.1 Analysis versus Numerical Analysis

The word *analysis* in mathematics usually means how to solve a problem through equations. The solving procedures may include algebra, calculus, differential equations, or the like.

*Numerical analysis* is similar in that problems solved, but the only procedures that are used are arithmetic: add, subtract, multiply, divide and compare.

Differences between *analytical solutions* and *numerical solutions*:

1) An analytical solution is usually given in terms of mathematical functions. The behavior and properties of the function are often apparent. However, a numerical solution is always an approximation. It can be plotted to show some of the behavior of the solution.

2) An analytical solution is not always meaningful by itself.

Example:  $\sqrt{3}$  as one of the roots of  $x^3 - x^2 - 3x + 3 = 0$ .

3) While the numerical solution is an approximation, it can usually be evaluated as accurate as we need. Actually, evaluating an analytic solution numerically is subject to the same errors.

## 1.2 Computers and Numerical Analysis

- As you will learn enough about many *numerical methods*, you will be able to write *programs* to implement them.
- Programs can be written in any computer language. In this course all programs will be written in Matlab environment.
- Actually, writing programs is not always necessary. Numerical analysis is so important that extensive commercial software packages are available.
