Adaptation And Hybridization In Computational Intelligence Adaptation Learning And Optimization:

Adaptation and Hybridization in Computational Intelligence Iztok Fister, Iztok Fister Jr., 2015-01-24 This carefully edited book takes a walk through recent advances in adaptation and hybridization in the Computational Intelligence CI domain. It consists of ten chapters that are divided into three parts. The first part illustrates background information and provides some theoretical foundation tackling the CI domain. The second part deals with the adaptation in CI algorithms while the third part focuses on the hybridization in CI. This book can serve as an ideal reference for researchers and students of computer science, electrical and civil engineering, economy and natural sciences that are confronted with solving the optimization, modeling and simulation problems. It covers the recent advances in CI that encompass Nature inspired algorithms like Artificial Neural networks, Evolutionary Algorithms and Swarm Intelligence based algorithms.

Computational Intelligence in Sports Iztok Fister, Iztok Fister Jr., Dušan Fister, 2018-12-17 This book presents recent research on computational intelligence CI algorithms in the field of sport. In the modern age, information technologies have greatly reduced the need for human effort in the carrying out of many daily tasks. These technologies have radically influenced the lives of humans and the information society in general. Unfortunately, these advances have brought with them certain negative effects, including the encouragement of sedentary lifestyles and the attendant health problems such as obesity that these engender. Other modern maladies, chiefly cardiovascular disease, diabetes and cancer, have also been on the increase. Today, sports are virtually the only activity that still connects modern humans to their original lifestyle, which was based on physical motion. This book tears familiarizing sports scientists with the foundations of computational intelligence while at the same time presenting the problems that have arisen in the training domain to computer scientists. Lastly, the book proposes the use of an Artificial Sports Trainer designed to enhance the training of modern athletes who cannot afford the considerable expense of hiring a human personal trainer. This intelligent system can monitor performance and design and direct appropriate future training, thus promoting both healthy lifestyles and competitive success in athletes. **Numerical and Evolutionary Optimization** 2018 Adriana Lara, Marcela Quiroz, Efrén Mezura-Montes, Oliver Schütze, 2019-11-19 This book was established after the 6th International Workshop on Numerical and Evolutionary Optimization (NEO) representing a collection of papers on the intersection of the two research areas covered at this workshop: numerical optimization and evolutionary search techniques. While focusing on the design of fast and reliable methods lying across these two paradigms, the resulting techniques are strongly applicable to a broad class of real world problems such as pattern recognition, routing, energy lines of production, prediction and modeling among others. This volume is intended to serve as a useful reference for mathematicians, engineers and computer scientists to explore current issues and solutions emerging from these mathematical and computational methods and their applications. **Optimization in Control Applications** Guillermo
