Voice-Quality Engineering in Wireless Networks Avi Perry,2007 Publisher description **Adaptive Identification of Acoustic Multichannel Systems Using Sparse Representations** Karim Helwani,2014-07-25 This book treats the topic of extending the adaptive filtering theory in the context of massive multichannel systems by taking into account a priori knowledge of the underlying system or signal The starting point is exploiting the sparseness in acoustic multichannel system in order to solve the non uniqueness problem with an efficient algorithm for adaptive filtering that does not require any modification of the loudspeaker signals The book discusses in detail the derivation of general sparse representations of acoustic MIMO systems in signal or system dependent transform domains Efficient adaptive filtering algorithms in the transform domains are presented and the relation between the signal and the system based sparse representations is emphasized Furthermore the book presents a novel approach to spatially preprocess the loudspeaker signals in a full duplex communication system The idea of the preprocessing is to prevent the echoes from being captured by the microphone array in order to support the AEC system The preprocessing stage is given as an exemplarily application of a novel unified framework for the synthesis of sound figures Finally a multichannel system for the acoustic echo suppression is presented that can be used as a postprocessing stage for removing residual echoes As first of its kind it extracts the near end signal from the microphone signal with a distortionless constraint and without requiring a double talk detector Smart Mobile In-Vehicle Systems Gerhard Schmidt,Huseyin Abut,Kazuya Takeda,John H.L. Hansen,2013-11-25 This is an edited collection by world class experts from diverse fields focusing on integrating smart in vehicle systems with human factors to enhance safety in automobiles The book presents developments on road safety in vehicle technologies and state of the art systems Includes coverage of DSP technologies in adaptive automobiles algorithms and evaluation of in car communication systems driver status monitoring and stress detection in vehicle dialogue systems and human machine interfaces challenges in video and audio processing for in vehicle products multi sensor fusion for driver identification and vehicle to infrastructure wireless technologies *Advances in Fundamental and Applied Research on Spatial Audio* Brian F.G. Katz,Piotr Majdak,2022-10-05 Spatial audio is a dynamic and rapidly evolving field as it is closely linked to advances in computer technology and digital signal processing The democratization of virtual reality hardware available as consumer devices has moved the field further out of traditional laboratory research and directly into applied research targeting a wide range of consumers *Advances in Fundamental and Applied Research on Spatial Audio* presents a collection of eight peer reviewed chapters on this exciting area of research The contributions are organized into three sections Acoustic Methodology Perception and Applications and cover a range of topics addressing both headphone and loudspeaker based reproductions
