Activity Recognition In Pervasive Intelligent Environments Atlantis Ambient And Pervasive Intelligence:

Activity Recognition in Pervasive Intelligent Environments Liming Chen,Chris D. Nugent,Jit Biswas,Jesse Hoey,2011-05-04 This book consists of a number of chapters addressing different aspects of activity recognition roughly in three main categories of topics The first topic will be focused on activity modeling representation and reasoning using mathematical models knowledge representation formalisms and AI techniques The second topic will concentrate on activity recognition methods and algorithms Apart from traditional methods based on data mining and machine learning we are particularly interested in novel approaches such as the ontology based approach that facilitate data integration sharing and automatic automated processing In the third topic we intend to cover novel architectures and frameworks for activity recognition which are scalable and applicable to large scale distributed dynamic environments In addition this topic will also include the underpinning technological infrastructure i e tools and APIs that supports function capability sharing and reuse and rapid development and deployment of technological solutions The fourth category of topic will be dedicated to representative applications of activity recognition in intelligent environments which address the life cycle of activity recognition and their use for novel functions of the end user systems with comprehensive implementation prototyping and evaluation This will include a wide range of application scenarios such as smart homes intelligent conference venues and cars

Advanced Computational Techniques for Renewable Energy Systems Mustapha Hatti,2023-02-13 In this book one hundred selected articles in which the technology and science elite share contribute to technology development collaborate and evolve the latest cutting edge technologies open ecosystem resources new innovative computing solutions hands on labs and tutorials networking and community building to ensure better integration of artificial intelligence into renewable energy systems Innovation in computing continues at a growing pace The key to success in this area is not only hardware but also the ability to leverage rapid advances in artificial intelligence including machine learning and deep learning data analytics data streaming and cloud computing which go hand in hand with intensive research activity on the underlying computational methods The chapters in this book are organized into thematic sections on advanced computing techniques artificial intelligence smart and sustainable cities renewable energy systems materials in renewable energy smart energy efficiency smart cities applications recent developments and new trends online supervision of renewable energy platforms predictive control in renewable systems smart embedded systems for photovoltaic applications
