Autodyn Subroutines Manual:

Fundamentals of Shaped Charges William P. Walters, Jonas A. Zukas, 1989 An introduction to the art and science of developing shaped charges Presents the history of shaped charges the principles governing their design and a variety of example applications Includes discussion of Gurney and Taylor methods jet formation the visco plastic model jet penetration fabrication computational aspects and how to design shaped charges for different applications Annotation copyrighted by Book News Inc Portland OR

High Velocity Impact Dynamics Jonas A. Zukas, 1990-11-08 This compendium of mathematical techniques for the modeling and simulation of high velocity impacts presents the various analytical and experimental aspects of impact dynamics and describes the responses of a variety of materials and structures under impact Coverage is extended beyond that of the author's Impact Dynamics and deals with new topics in impacts involving inert materials including the dynamic response to energetic and inert materials Treatment uses classical mechanics along with the conservation laws combined with failure analysis

Computational Plasticity Mao-Hong Yu, Jian-Chun Li, 2012-12-02 Computational Plasticity with Emphasis on the Application of the Unified Strength Theory explores a new and important branch of computational mechanics and is the third book in a plasticity series published by Springer The other two are Generalized Plasticity Springer Berlin 2006 and Structural Plasticity Springer and Zhejiang University Press Hangzhou 2009 This monograph describes the unified strength theory and associated flow rule the implementation of these basic theories in computational programs and shows how a series of results can be obtained by using them The unified strength theory has been implemented in several special nonlinear finite element programs and commercial Finite Element Codes by individual users and corporations Many new and interesting findings for beams plates underground caves excavations strip foundations circular foundations slop underground structures of hydraulic power stations pumped storage power stations underground mining high velocity penetration of concrete structures ancient structures and rocket components along with relevant computational results are presented This book is intended for graduate students researchers and engineers working in solid mechanics engineering and materials science The theories and methods provided in this book can also be used for other computer codes and different structures More results can be obtained which put the potential strength of the material to better use thus offering material saving and energy saving solutions Mao Hong Yu is a professor at the Department of Civil Engineering at Xi'an Jiaotong University Xi'an China

Shock Compression of Condensed Matter--2003 Michael D. Furnish, Yogendra M. Gupta, Jerry W. Forbes, 2004 Two volumes contain 350 papers presented at the 13th Biennial International Conference of the APS Topical Group on Shock Compression of Condensed Matter Portland Oregon July 2003 One of the three plenary lectures was given by James Asay Institute for Shock Physics Washington State U Pullman Washington on wave structure studies in condensed matter physics The papers in v 1 address nonenergetic materials energetic materials phase transitions the modeling simulation theory and molecular dynamics modeling of nonreactive and

reactive materials spall fracture and fragmentation constitutive and microstructural properties of metals mechanical properties of polymers and composites and mechanical properties of ceramics glasses ionic solids and liquids The largest number of papers in v 2 are under the headings mechanical properties of reactive materials detonation and burn phenomena explosive and initiation studies experimental techniques and geophysics structures and medical applications The contributors represent 14 countries where they work in state and private industry and academic settings Indexed by both author and subject Annotation 2004 Book News Inc Portland OR booknews com **Hyper-Velocity Impacts on Rubble Pile**

Asteroids Jakob Deller, 2016-12-01 The thesis presents a tool to create rubble pile asteroid simulants for use in numerical impact experiments and provides evidence that the asteroid disruption threshold and the resultant fragment size distribution are sensitive to the distribution of internal voids This thesis represents an important step towards a deeper understanding of fragmentation processes in the asteroid belt and provides a tool to infer the interior structure of rubble pile asteroids Most small asteroids are rubble piles re accumulated fragments of debris from earlier disruptive collisions The study of fragmentation processes for rubble pile asteroids plays an essential part in understanding their collisional evolution An important unanswered question is what is the distribution of void space inside rubble pile asteroids As a result from this thesis numerical impact experiments can now be used to link surface features to the internal structure and therefore help to answer this question Applying this model to asteroid teins which was imaged from close range by the Rosetta spacecraft a large hill like structure is shown to be most likely primordial while a catena of pits can be interpreted as evidence for the existence of fracturing of pre existing internal voids □□□□□□ ,1993-02 Updated Manual for a UMAT Subroutine
