Becoming Human The Development Of Language Self And Self Consciousness:

Becoming Human J. Canfield, 2007-09-28 This book is a philosophical examination of the stages in our journey from hominid to human Dealing with the nature and origin of language self consciousness and the religious ideal of a return to Eden it has a philosophical anthropology approach It provides an account of our place in nature consistent with both empiricism and mysticism *Consciousness, Self-Consciousness, and the Science of Being Human* Simeon Locke, 2008 It is a question that may seem at once simple yet profoundly complicated What is consciousness And from where in the body or mind does it arise In his work esteemed Harvard scholar Simeon Locke M D brings us the debate over substance and source in consciousness and offers what he sees as the resolution to this debate with accessible text explaining the neurologist's thinking on how to define measure and explain consciousness from a variety of fields perspectives Efforts to understand consciousness perhaps the supreme manifestation of self consciousness continue Books are written Predictions are made Physicists psychologists biologists and philosophers participate The brain is studied but an understanding of consciousness eludes us explains Locke Still the quest continues We are not looking in the wrong place for surely consciousness is a function of the nervous system But we may be looking for the wrong thing Locke adds Quest implies we are looking for something and consciousness is not a something It is a process or so called distributed function of the brain In this work Locke explains how the nervous system plays a primary role in consciousness Although scholars and scientists have debated the source of consciousness for more than a century advances in brain science have brought the question to the forefront now launching events from the Toward a Science of Consciousness convention in 2006 to the 11th Annual Association for the Scientific Study of Consciousness convention in 2007 Across the nation scholars and students are working to determine answers about consciousness at sites from California's John F Kennedy University degree program in Consciousness and Transformative Studies to Vermont's Goddard College degree program in Consciousness Studies And in this work a patriarch in the field of Neurology explains his science and its vital role in consciousness and how it makes us human [What Makes Us Human: How Minds Develop through Social Interactions](#) Jeremy Carpendale, Charlie Lewis, 2020-12-24 How do you go from a bunch of cells to something that can think This question asked by the 9 year old son of one of the authors speaks to a puzzle that lies at the heart of this book How are we as humans able to explore such questions about our own origins the workings of our mind and more In this fascinating volume developmental psychologists Jeremy Carpendale and Charlie Lewis delve into how such human capacities for reflection and self awareness pinpoint a crucial facet of human intelligence that sets us apart from closely related species and artificial intelligence Richly illustrated with examples including questions and anecdotes from their own children they bring theories and research on children's development alive The accessible prose shepherds readers through scientific and philosophical debates translating complex theories and concepts for psychologists and non psychologists alike What Makes Us Human is a compelling introduction to current debates about the processes

through which minds are constructed within relationships Challenging claims that aspects of thinking are inborn Jeremy Carpendale and Charlie Lewis provide a relationally grounded way of understanding human development by showing how the uniquely human capacities of language thinking and morality develop in children through social processes They explain the emergence of communication within the rich network of relationships in which babies develop Language is an extension of this earlier communication gradually also becoming a tool for thinking that can be applied to understanding others and morality Learning more about the development of what is right in front of us such as babies actions developing into communicative gestures leads to both greater appreciation of the children in our lives and a grasp of what makes us human This book will be of interest to anyone curious about the nature of language thinking and morality including students parents teachers and professionals working with children
