

HOW TO RIG THE FLOAT FISHING SETUP

FLOAT

Floats are generally plastic, cork or foam. They keep your hook/bait drifting correctly down the river. The way your Float sits or reacts on the top of the water will provide you with a lot of information.

MAINLINE

This is the primary line on your reel. This line should ALWAYS be a stronger weight than Leader line.

WEIGHT

Another key piece of the drift fishing setup. There are many styles of weights. The weight ensure the float sits up right, and gets your bait/lure down to the bottom/to the fish.

EGG, CORKIE, BAIT

Depending on what lure you're using this may be optional. It could also be a tuft of yarn, roe sack, shrimp, etc, connected to the hook by an egg loop.

BOBBER STOPPER

Depending on your float style, it may/may not need a bobber stop. For slip floats that slide freely up/down the mainline, they will need a Bobber stop in order to set the depth for your setup. The bobber stop above the float determines the depth of your bait/lure.

LEADER LINE

This is a short line that runs from the mainline to the hook. This line strength should be less than Mainline. Choosing a leader based on water conditions and species is important.

BEAD & DUO-LOCK

The bead acts as a buffer between the mainline knot and the weight. This is optional piece, you can attach mainline directly to swivel as well. If you like to pretie leaders with swivels already attached, the duo-lock allows for a quick change up.

HOOK

The hook could be any type of lure: Bait hook, Jig, Spoon, Spinner, etc. In the example illustration, this is a bait hook that would have some sort of bait (fake or real) attached to it.
