Behavioral Case Formulation Ira D. Turkat, 2013-12-14 One of the most frequent requests I receive from graduate students is for references on how to formulate a complex clinical case Typically after reading the recommended materials the student returns to request more detailed accounts of how clinicians think about particular cases The general lack of such materials in the behavior therapy literature led to the formation of the present volume Throughout much of the behavior therapy literature one gets the impression that most cases seen present circumscribed and straight forward psychological problems In my experience such cases are rare Accordingly the present volume was designed to cover more complex problems such as sociopathy and paranoid personality These disorders are rarely discussed in the behavior therapy literature but nonetheless seem to appear regularly in clinical settings The cases presented in this book are descriptions of patients seen clinically by the editor or by the contributors Work on this text began while I was a faculty member at Vanderbilt University and took several years to complete As the contributors would attest the task I set out for them was atypical and often difficult The complexities involved in articulating how one conceptualizes a case are numerous and may help to explain why there are so few sources available on case formulation The fact that our current state of knowledge in psychopathology is rather limited further exacerbates the problem The Case Formulation Approach to Cognitive-Behavior Therapy

McLeod, Amanda Jensen Doss, Thomas H. Ollendick, 2013-07-19 This comprehensive volume shows how to use both diagnostic and behavioral assessment knowledgeably and effectively throughout the process of treatment The two traditions have developed along separate paths each with its own conceptual underpinnings and psychometric strengths Used together they can produce a complete picture of a child's or adolescent's needs and strengths The expert editors and contributors describe the full range of evidence based assessment tools and illustrate their application with two intake to termination case examples both based on DSM 5 Reproducible tools include a behavioral recording form and a multipage case conceptualization worksheet that can be downloaded and printed in a convenient 8 1/2 x 11 size
