Giovanni Vigna, 2003-05-20 New paradigms can popularize old technologies A new standalone paradigm the electronic desktop popularized the personal computer A new connected paradigm the web browser popularized the Internet Another new paradigm the mobile agent may further popularize the Internet by giving people greater access to it with less eort MobileAgentParadigm The mobile agent paradigm integrates a network of computers in a novel way designed to simplify the development of network applications To an application developer the computers appear to form an electronic world of places occupied by agents Each agent or place in the electronic world has the authority of an individual or an organization in the physical world The authority can be established for example cryptographically A mobile agent can travel from one place to another subject to the destination place s approval The source and destination places can be in the same computer or in different computers In either case the agent initiates the trip by executing a go instruction which takes as an argument the name or address of the destination place The next instruction in the agent s program is executed in the destination place rather than in the source place Thus in a sense the mobile agent paradigm reduces networking to a program instruction A mobile agent can interact programmatically with the places it visits and if the other agents approve with the other agents it

Jagoda,M. de Villepin,2013-11-11 1 1 COMMUNICATION WHILE TRAVELLING The pace of our daily life has been increasing for several decades Our needs have multiplied as new products have appeared and then been replaced after a few years or even months of existence by a more fashionable product or one of higher performance The life cycles of the technologies used in consumer and professional electronic products are also becoming shorter This acceleration is an inherent fact of our consumer society and the relationship between people and machines are Lifestyles due to the multiplicity of ephemeral consumer products Objects changing no longer have a history they are merely tools which fulfil a predetermined function Personal portable products are of a new type which has appeared among pens wallets these impersonal objects This category includes watches handbags calculators portable radios and pocket telephones As these products for the pocket are carried on one s person they belong in a very personal way and have therefore a specific identity corresponding to the image which they are given In the evolution of lifestyles the explosive increase of travel and time management are major factors The pocket

telephone is therefore remarkable for two reasons. It is not only an impersonal tool or product but is also very much a personal portable product. The possibility of distant communication while travelling being able to call or be called at will anywhere at any time permits the pocket telephone to be often considered as a desirable almost magic personal item. The Passenger Has Gone Digital and Mobile Nawal K. Taneja, 2016-02-24 Technology is changing expectations in the airline industry. Passengers want to be in control and they expect airlines to become solution providers and aggregators of value to provide them with personalized services. Airline employees expect to be given the tools to do their jobs and to meet passenger expectations. Airline executives expect to make returns that are reasonable and relatively stable through business cycles. All of these expectations can be met by airlines through the effective and efficient leveraging of information and technology to shift from being operations and product centric to becoming customer centric and dramatically improving the overall passenger travel experience throughout the travel cycle. In this new book by world renowned airline expert Nawal K. Taneja, the 7th in a series with Ashgate, the author explores and explains the game changing opportunities presented to the industry by new generation information and technology. He shows how information and technology can now drive not just enable an airline's strategy to become truly customer centric at a personalized level while at the same time enabling the operator to reduce costs, enhance revenues, reduce risks and become much more flexible and agile by better managing complexity.
