Sheet Metal Forming Processes and Die Design Second Edition provides an expanded and more comprehensive treatment of sheet metal forming processes while placing forming processes and die design in the broader context of the techniques of press working sheet metal. Included are the hows and whys of product analysis as well as the techniques for blanking punching bending deep drawing stretching material economy strip design movement of metal during stamping and tooling. While concentrating on simple applicable engineering methods rather than complex numerical techniques, the author uses many illustrations, tables, and charts to enhance comprehension and learning. The Sheet Metal HVAC Pro Calc is a versatile calculator that enables tradesmen to calculate complex problems with dedicated key functions that are labeled in standard industry terms. The calculator has other advanced built-in construction math functions to enable HVAC and sheet metal tradesmen to do their work alongside other trades. In addition to the built-in functions, this calculator can handle order of operation, perform square, cube, square root, and cube root calculations, determine ArcK constant for convenient Arc length solutions, and has an offset function for S-shaped bends in ductwork. It can also help solve the layout for wrapper length, centerline radius, and the angle. It works as a regular calculator with typical symbols. Together, Sheet Metal Forming Processes and Die Design and the Sheet Metal HVAC Pro Calculator are the perfect combination resource providing instant access to metrics and measurements with the flip of a page and press of a button. This incredible set is a must-have for students and professionals in the field of Sheet Metal. Features in Print and Calculator Emphasizes the influence of materials as an aid to understanding manufacturing processes and operations. Features the essential mathematical formulas and calculations needed for various die operations and performance evaluation. Shows the comparative advantages and liabilities for each manufacturing process and operation. Offers a complete picture of the knowledge and skills needed for the effective design of dies for sheet metal forming processes, highlighted with illustrative examples. Includes a chapter on quick die change systems and die design and an appendix dedicated to the technical specifications of Helical and Belleville springs. Custom HVAC and Sheet Metal functions let you simplify Test and Balance TAB with built-in Fan Law function, CFM, RPM, SP, and BHP velocity and velocity pressure Functions and Terminology consistent with sheet metal and HVAC trade terminology. Parenthesis Operator allows you to easily enter complex formulas. Memory Storage conveniently stores frequently used constants or interim solutions.

Metal Shaping Processes Vukota Boljanovic, 2010. As the only comprehensive text focusing on metal shaping processes, which are still the most widely used processes in the manufacture of products and structures, Metal Shaping Processes carefully presents the fundamentals of metal shaping processes with their relevant applications. The treatment of the subject matter is adequately descriptive for

those unfamiliar with the various processes and yet is sufficiently analytical for an introductory academic course in manufacturing. The text as well as the numerous formulas and illustrations in each chapter clearly show that shaping processes as a part of manufacturing engineering are a complex and interdisciplinary subject. The topics are organized and presented in such a manner that they motivate and challenge students to present technically and economically viable solutions to a wide variety of questions and problems including product design. It is the perfect textbook for students in mechanical, industrial and manufacturing engineering programs at both the Associate Degree and Bachelor Degree programs as well as a valuable reference for manufacturing engineers, those who design, execute and maintain the equipment and tools, process engineers, those who plan and engineer the manufacturing steps, equipment and tooling needed in production, manufacturing managers and supervisors, product design engineers and maintenance and reliability managers and technicians.

Features: Each chapter begins with a brief highlighted outline of the topics to be described. Carefully presents the fundamentals of the particular metal shaping process with its relevant applications within each chapter so that the student and teacher can clearly assess the capabilities, limitation and potentials of the process and its competitive aspects. Features sections on product design considerations which present guidelines on design for manufacturing in many of the chapters. Offers practical, understandable explanations even for complex processes. Includes text entries that are coded as in an outline with these numerical designations carried over the 320 related illustrations for easy cross referencing. Provides a dual ISO and USA unit system. Contains end of chapter Review Questions. Includes a chapter on sheet metalworking covering cutting processes, bending process, tubes and pipe bending, deep drawing processes, other sheet metal forming process, stretch forming, spinning, rubber forming and superplastic forming and diffusion bonding. Provides a useful die classification with 15 illustrations and description. Presses for sheet metalworking and high energy rate forming processes. A chapter on nontraditional manufacturing process discusses such important processes as mechanical energy processes, ultrasonic machining, water jet cutting, electrochemical machining processes, electrochemical machining, electrochemical grinding, thermal energy processes, electric discharge processes, laser beam machining, electron beam machining and chemical processes, chemical milling.
