Power Systems Protection, control & automation Maty Ghezelayagh, 2020-03-05 This book provides practical applications of numerical relays for protection and control of various primary equipment namely distribution and transmission networks HV and EHV transformers and busbars reactive and active power plants Unlike other books attempts have been made to address the subject from practical point of view rather than theoretical one which can otherwise be found in most of other text books The setting design and testing philosophy of numerical relays as discussed in this book have been successfully applied in the fields on various projects and consequently can be used as a practical guideline for implementation on future projects The book covers the followings subjects Fundamental concepts in the field of power system protection and control Required system modelling and fault level analysis for the design and setting of protection and control devices Setting and design philosophy of numerical relays of different primary equipment Practical application of anti Islanding schemes for two different systems namely distribution generation DG and transmission generation TG Challenges and solutions which are encountered during secondary equipment refurbishment replacement in brown field substations with inclusion of two practical case studies Required tests for factory acceptance tests FAT site acceptance tests SAT and commissioning tests of numerical relays in conventional and digital substations Causes analysis and proposed mitigation techniques of more than 100 worldwide disturbances which have occurred in different type of primary equipment which have resulted to major system black out or plant explosion or even fatality and New and future trend of application of numerical relays including application of super IED for protection and control of multi primary equipment implementation of digital substation remote integrations self and remote testing of IED distribution networks fault location techniques and fault locators using travelling waves synchro phasors time domain line protection using travelling waves adaptive slope characteristics of differential protection protection and control schemes of micro grids mitigation technique for prevention of loss of reactive power plants and transformers due to solar storms *Futuristic Trends in Numerical Relaying for Transmission Line Protections* Ujjaval Patel, Praghresh Bhatt, Nilesh Chothani, 2020-10-17 This book presents the state of the art approach for transmission line protection schemes for smart power grid It provides a comprehensive solution for real time development of numerical relaying schemes for future power grids which can minimize cascade tripping and widespread blackout problems prevailing all around the world The book also includes the traditional approach for transmission line protection along with issues and challenges in protection philosophy It highlights the issues for sheltering power grid from unwanted hazards with very fundamental approach The book follows a step by step approach for resolving critical issues like high impedance faults power swing detection and auto reclosing schemes with adaptive protection process The book also covers the topic of hardware solution for real time implementation of auto reclosing scheme for transmission line protection schemes along with comparative analysis with the recently developed analytical approach such as Artificial Neural Network
