

INSTALLATION, START-UP AND OPERATING INSTRUCTIONS

Armstrong Differential Condensate Controller

This bulletin should be used by experienced personnel as a guide to the installation, start-up, and operation of Differential Condensate Controllers. Selection or installation of equipment should always be accompanied by competent technical assistance. We encourage you to contact Armstrong or its local representative if further information is required.

These instructions primarily cover the Condensate Controllers installed with the secondary steam being discharged back into the condensate return piping (See Figure 1 below). If the secondary steam discharge from the Controller is into a separate pipe header for re-use in other condensing units, the manual metering valve setting "D" may differ, depending upon the pressure of the secondary steam header.

For General Description of Differential Condensate Controllers and their operation -- See Bulletin No. 126.

INSTALLATION RECOMMENDATIONS

1. Locate Controller below equipment being drained when possible.
2. Full pipe size connections should be used to Controller inlet, outlet and secondary steam discharge.
3. Provide hand valves "E" and "B" as shown in Figure 1. These not only provide proper isolation for repair but are necessary when adjusting operation of Controller during initial start-up. (See Start-Up Procedure).
4. Provide a "test valve" hook-up ("C" in Figure 1). See Figures 2 & 3 for connection sizes and locations on the DC Controllers.
