Advances in Urban Stormwater and Agricultural Runoff Source Controls J. Marsalek, W. Ed Watt, Evzen Zeman, Heiko Sieker, 2012-12-06 Notwithstanding past achievements flood damage continues to rise throughout the world as the magnitudes of floods increase partly as a result of poor land management and partly by climate change growing populations and continuing development in flood prone areas and the aging and deterioration of flood defences One of the major goals of water management is the protection of society from floods That issue is addressed here in terms of such broad issues as flood analysis flood impact non structural and structural flood management measures Non structural measures focus on flood plain management flood insurance flood forecasting and warning and emergency measures during floods Structural measures focus on catchment management embankments and flood reservoirs Post flood measures are also discussed Future planning of flood management should be based on a clear understanding of the effectiveness interventions and their impacts on river catchment ecosystems

Advances in Urban Flood Management Richard Ashley, Stephen Garvin, Erik Pasche, Andreas Vassilopoulos, Chris Zevenbergen, 2007-02-01 One of the effects of global climate change is the increasing variability of extreme flood events and cyclones Current measures to mitigate flood impacts particularly in the urban environment are based on previously planned flood risk intervals and no longer provide sufficient protection Being prepared for unexpected changes and extreme flood events asks for a paradigm shift in current strategies to avoid and manage flood disasters In order to stem the increasing impact of urban floods a major rethink of current planning and flood management policies and practice is required taking into account different spatial and temporal scales This book addresses a broad spectrum of relevant issues in the emerging field of urban flood management It may act as a stimulus for further research and development in urban flood management while informing and engaging stakeholders in the promotion of integrated and cooperative approaches in water management An interdisciplinary approach which will be of interest to all those who are active in water risk and urban management
