Autodesk Arnold Render User Guide for MAYA Serdar Hakan DÜZGÖREN, Arnold Arnold is an advanced cross-platform rendering library or API used by a number of prominent organizations in film, television, and animation, including Sony Pictures Imageworks. It was developed as a photo-realistic, physically-based ray-tracing alternative to traditional scanline-based rendering software for CG animation. Arnold uses cutting-edge algorithms that make the most effective use of your computer's hardware resources: memory, disk space, multiple processor cores, and SIMD/SSE units. The Arnold architecture was designed to easily adapt to existing pipelines. It is built on top of a pluggable node system; users can extend and customize the system by writing new shaders, cameras, filters, and output driver nodes, as well as procedural geometry, custom ray types, and user-defined geometric data. The primary goal of the Arnold architecture is to provide a complete solution as a primary renderer for animation and visual effects. However, Arnold can also be used as a ray server for traditional scanline renderers, a tool for baking procedural generation of lighting data/lightmaps for videogames, an interactive rendering and relighting tool.

Autodesk Fusion 360 Animation and Simulation User Guide Serdar Hakan DÜZGÖREN, Animation overview. Use the Animation workspace to create exploded views and to animate parts and assemblies. Animations can be used to evaluate and communicate design functionality and to illustrate assembly or repair operations. Storyboards. A storyboard is a collection of views and actions along a timeline. A single storyboard represents one animation. Use multiple storyboards to create a collection of animations. You can edit the default storyboard names to display meaningful titles. The storyboard duration is the total running time of the actions on that storyboard. Actions. An action is a visual representation of a component transforming during a point in time. Add actions to the timeline on a storyboard to create an animation. You can adjust the duration and placement of each action on the timeline. When the playhead is on the timeline at a positive point in time, actions are captured and can be edited. The timeline displays all actions included in the storyboard. When the playhead is at Time 0 or in the Scratch Zone, the empty zone to the left of the timeline, actions are not being recorded but the transforms performed are honored. This is especially useful for setting up a scene in preparation for the animation.
