Balancing and Sequencing of Assembly Lines

Armin Scholl,1999-02-26 The book deals with two main decision problems which arise when flow line production systems are installed and operated The assembly line balancing problem consists of partitioning the work necessary to assemble the product s among different stations of an assembly line If several models of a product are jointly processed on a line this medium term problem is connected with the short term problem of determining an operating sequence of the models In Part I balancing and sequencing problems are discussed classified and arranged within a hierarchical planning system In the present second edition special emphasis is given to u shaped assembly lines which are important components of modern just in time production systems Part II is concerned with exact and heuristic procedures for solving those decision problems For each problem type considered a survey of existing procedures is given and new efficient solution methods are developed Comprehensive numerical investigations showing the effectiveness of the new methods and their superiority over existing approaches are reported
