Infinite Dimensional Analysis Charalambos D. Aliprantis, Kim C. Border, 2007-05-02 This monograph presents a study of modern functional analysis It is intended for the student or researcher who could benefit from functional analytic methods but does not have an extensive background and does not plan to make a career as a functional analyst Economics and Semiotics Stratos Myrogiannis, Constantinos Repapis, 2025-06-30 Everything in our world can be interpreted as a sign This opens up the question How do we proceed from semantics to pragmatics from theory to practice and vice versa What is the nature of the relation between interpretation action and reality And what can we learn by viewing economics and the

economy through this lens This volume gathers together a broad range of scholars in order to address issues relating to the intersection of economics and semiotic theory Using concepts from the fields of economics and semiotics the contributors to this volume revisit past and present theories and reinterpret models of thought and expression to show that our preconceptions about the economy can be fruitfully challenged and gain depth through a semiotic lens The application of the semiotics approach to economics discourse is vital in helping us to examine topics that range from theory and economic history to the development of key economic ideas and concepts The volume aims to enhance our understanding of how economic agents act and our conceptualization of the economy and its cultural products can be reimagined This volume will be of great interest to economists literary scholars and students in the humanities

Designing Public Policies Francisco J. André, M. Alejandro Cardenete, Carlos Romero, 2010-09-14 This monograph provides a novel approach to the evaluation of economic policy by combining two different analytical strategies On the one hand the computable general equilibrium CGE analysis a standard tool mostly used to quantify the impact of economic measures or changes in the structural data of the economy On the other hand the multiple criteria decision making MCDM approach an optimisation technique that deals with problems with more than one objective Typically CGE is well suited for the analysis of the interactions of multiple agents from the point of view of a planner single objective Combining this technique with the MCDM approach allows developing models in which we find many interacting agents and a decision maker with several objectives The contribution of this work is partly methodological and partly applied It provides a framework for the analysis of this type of problems as well as a series of applications in which the strength of the approach is made clear The consideration of environmental problems as a specific field in which this technique of analysis can be used is particularly well chosen The environmental concern keeps growing steadily and has already become an issue in most of the standard economic decisions It is therefore extremely important to find systematic ways to introduce such a concern in the models with which we evaluate the impact of policy measures
