Sistemas de Información Medioambiental

José Manuel Cotos Yáñez, José Ángel Taboada González, 2003-09. La grave degradación del medioambiente que la acción del hombre ha provocado en el último siglo ha despertado en las sociedades más avanzadas la preocupación por su conservación. Además la facilidad con la que errores humanos o acciones deliberadas provocan catástrofes ha exigido su vigilancia. Tratamos en este libro la aportación de las Tecnologías de la Información TI a la conservación y protección del medioambiente dividiéndolo en dos partes claramente diferenciadas. La primera parte del libro introduce al lector en la teoría de las tecnologías utilizadas. La distribución espacial de la información utilizada justifica el uso extensivo de los Sistemas de Información Geográfica que además a los Sistemas de Información clásicos soportados por las Bases de Datos la necesaria gestión espacial. Asimismo el volumen de información normalmente manejada hace necesario su análisis automático a través de novedosas técnicas introducidas en los dos últimos capítulos de esta primera parte. Ya en la segunda parte del libro se presentan al lector un conjunto de aplicaciones funcionando en la actualidad que muestran el uso práctico de estas tecnologías. Entre ellas cabe destacar el Sistema de Información Ambiental puesto en marcha por la Xunta de Galicia, la clasificación de usos del suelo a partir de datos in situ e imágenes de satélite desarrollada por el SITGA, ambos claros ejemplos del manejo de datos espacialmente distribuidos. Otras aplicaciones atienden además a la gestión en tiempo real de los datos como el sistema de Gestión de Medios Aéreos, Contraincendios, la gestión de residuos sólidos urbanos o el control energético.
