A Study of the Circulation of Ceramics in Cyprus from the 3rd Century BC to the 3rd Century AD John Lund, 2015-10-26 This is the first monograph devoted solely to the ceramics of Cyprus in the Hellenistic and Roman Periods The island was by then no longer divided into kingdoms but unified politically first under Ptolemaic Egypt and later as a province in the Roman Empire Submission to foreign rule was previously thought to have diluted if not obliterated the time honoured distinctive Cypriot character The ceramic evidence suggests otherwise The distribution of local and imported pottery in Cyprus points to the existence of several regional exchange networks a division that also seems reflected by other evidence The similarities in material culture exchange patterns and preferential practices

are suggestive of a certain level of regional collective self awareness From the 1st century BC onwards Cyprus became increasingly engulfed by mass produced and standardized ceramic fine wares which seem ultimately to have put many of the indigenous makers of similar products out of business or forced them to modify their output Also the ceramic record gradually became less diverse during the Roman Period than before developments which we today might be inclined to view as symptoms of an early form of globalisation

Re-activating Indigenous Knowledge from Oral History Asta Mønsted, 2025-09-11 This book focuses on Greenlandic oral history and how to better understand people their cultural remains and their landscape through their own stories It offers a way to consult Inuit oral history that opens up a perspective on houses and landscapes that may otherwise be invisible to the barren eye Working with and re activating Indigenous knowledge of Greenland the study draws on more than two thousand stories collected between 1735 and 1981 preserved and later enrolled in an online and searchable database The author unearths the concepts woven into Greenlandic Inuit s homes settlements and landscapes These re discovered insights challenge the archaeological interpretation transcending the tangible to illuminate the unseen The narratives contribute to safeguarding invaluable Indigenous knowledge and perhaps also to the revival of cultural practices customs and traditions The book demonstrates how oral history is more than merely fantastical myths and legends it is valuable knowledge for scholars and communities It

will be of particular interest for scholars of Indigenous studies anthropology archaeology and history Roman Landscape: Culture and Identity Diana Spencer, 2010 This survey explores how and why Romans of the late Republic and early Principate were fascinated with landscaped nature Thematic discussions and case studies work through what landscape represented and how studying Roman identity in terms of place environment and the natural world helps us better to understand Rome itself *Graphing Culture Change in North American Archaeology* R. Lee Lyman, 2021-06-10 Documentation analysis and explanation of culture change have long been goals of archaeology Scientific graphs facilitate the visual thinking that allow archaeologists to determine the relationship between variables and if well designed comprehend the processes implied by the relationship Different graph types suggest different ontologies and theories of change and particular techniques of parsing temporally continuous morphological variation of artefacts into types influence graph form North American archaeologists have grappled with finding a graph that effectively and efficiently displays culture change over time Line graphs bar graphs and numerous one off graph types were used between 1910 and 1950 after which spindle graphs displaying temporal frequency distributions of specimens within each of multiple artefact types emerged as the most readily deciphered diagram The variety of graph types used over the twentieth century indicate archaeologists often mixed elements of both Darwinian variational evolutionary change and Midas touch like transformational change Today there is minimal discussion of graph theory or graph grammar in introductory archaeology textbooks or advanced texts and elements of the two theories of evolution are still mixed Culture has changed and archaeology provides unique access to the totality of humankind's cultural past It is therefore crucial that graph theory construction and decipherment are revived in archaeological discussion

Extraordinary Cities Peter J. Taylor, 2013-01-01 Peter J Taylor has produced a sweeping empirically grounded defense of cities as fundamental building blocks of long term large scale social structures a way of freeing social science from state centric bias and indeed mankind's hope However the single greatest strength of this complex seductive argument is the insistence on treating cities relationally as process Here the key to understanding the significance of cities is by studying them in terms of the dynamic networks they form and in their relations to states Richard E Lee Binghamton University US The founding father of the famous Globalization and World Cities research network and think tank on worldwide links between cities presents this fascinating overview on cities in geohistory By moving cities to the centre stage Peter Taylor proposes that concern for states tell only part of the macro social story of humanity Cities have been and are the engines of innovation This impressive new book provides new insights into why cities succeed or fail The book is in the class with broadminded presentations like Jared Diamond's book *Guns Germs and Steel* Christian Matthiessen University of Copenhagen Denmark and President International Geographical Union's Commission on Urban Geography This is a big book by Peter Taylor It tells of the extraordinary world making powers of cities across the ages it explains why a state centric social science has constrained recognition of these powers over the last two centuries and it outlines a new indisciplinarity to

help us make sense of a human condition increasingly forged out of the urban Anyone troubled by the social sciences as we know them ought to read this book Ash Amin Cambridge University UK and author Land of Strangers Accepting that cities are extraordinary this book provides an original city centred narrative of human creativity past present and future In this innovative ambitious and wide ranging book Peter Taylor demonstrates that cities are the epicenters of human advancement In exploring cities as sites through which economies flourish by harnessing the creative potential of myriad communication networks the author considers cities from varying temporal and spatial perspectives Four stories of cities are told the origins of city networks the domination of cities by world empires the genesis of a singular modern creative interval in which innovation culminates in today s globalised cities and finally the need for cities to act as centres for human creativity to produce a more resilient global society in the current crisis century Providing a long term view through which to consider the role of cities in attending to incipient crises of the twenty first century this closely argued thesis will prove essential for students and scholars of urban studies geography and sociology and all with a professional interest in or personal fascination for cities
