Molecular Architecture and Dynamics of Meiotic Chromosomes Ricardo Benavente, Mónica Pradillo, Pedro A. San-Segundo, 2024-03-11 Meiosis is a special type of cell division that allows the generation of haploid gametes and is a key process for sexual reproduction of animals plants and fungi Haploidization requires that meiotic cells undergo a series of unique processes namely pairing synapsis recombination and segregation of homologous chromosomes This involves profound meiosis specific changes in the protein composition and architecture of homologous chromosomes as well as of the condensation and folding of chromatin that require a critical timing and regulation Despite this enormous complexity different organisms may achieve haploidization through common molecular mechanisms A major goal of this article collection is to provide an overview of how meiotic chromosomes and their components are critically involved in the mechanisms of haploidization and how dynamic protein complexes yield important structural intermediates and temporal regulation to this process We welcome submissions of original articles mini reviews and review articles dealing with the composition architecture function and regulation of meiotic chromosomes of animals plants and fungi using microscopic biochemical molecular genetic and or omic techniques *Architecture and Engineering* Oleg Kapliński, Wojciech Bonenberg, 2020-12-18 The book is addressed to architects and civil engineers Design and research are areas connecting their activities The contents of the book confirm the fact that the interface between architecture and engineering is multidimensional The ways of finding points of contact between the two industries are highlighted This is favored by the dynamically changing reality supported by new design paradigms and new research techniques The multithreaded subject matter of the articles is reduced to six sections Research Scopes Methods Design Aspects Context Nature of Research and Economy and Cost Calculation Each of the articles in these six blocks has its weight And so in the Nature of Research section the following areas have been underscored laboratory tests in situ research field investigations and street perception experiments The section Design Aspects includes design oriented thinking geometrical forms location of buildings cost prediction attractor and distractor elements and shaping spatial structures The new design and research tools are an inspiration and a keystone bonding architects and engineers **Tools for High Performance Computing 2015** Andreas Knüpfer, Tobias Hilbrich, Christoph Niethammer, José Gracia, Wolfgang E. Nagel, Michael M. Resch, 2016-07-27 High Performance Computing HPC remains a driver that offers huge potentials and benefits for science and society However a profound understanding of the computational matters and specialized software is needed to arrive at effective and efficient simulations Dedicated software tools are important parts of the HPC software landscape and support application developers Even though a tool is by definition not a part of an application but rather a supplemental piece of software it can make a fundamental difference during the development of an application Such tools aid application developers in the context of debugging performance analysis and code optimization and therefore make a major contribution to the development of robust and efficient parallel

software This book introduces a selection of the tools presented and discussed at the 9th International Parallel Tools Workshop held in Dresden Germany September 2 3 2015 which offered an established forum for discussing the latest advances in parallel tools
