[6/15/2011] The information in the section "The normal distribution table" only applies to paper-and-pencil sites. For students taking the exam under CBT, replace that section with the following:

Formulas in this course use the normal distribution. Most students will be taking this exam at a Prometric site. Prometric provides a standard normal distribution calculator. See http://www.prometric.com/SOA/MFE3F_calculator.htm to see how this works. The calculator provides values of the cumulative normal distribution function and its inverse to 5 decimal places.

In addition, you will be given a formula sheet. See http://www.prometric.com/SOA/MFE3F_calculator.htm for this sheet. It provides the standard normal density function, the lognormal density function, and moments of the lognormal distribution.

This edition of the manual was written before the Prometric calculator was introduced, and therefore uses the former rounding rules of the SOA, as listed in the section of the manual these paragraphs are replacing.

[6/26/2010] On page 24, the solution to exercise 1.21 is incorrect. The correct solution is

Using equation (1.10), the maturity value of the Treasury for every share purchased is

$$K + \text{CumValue}(\text{dividends}) = 95 + 2e^{0.04(0.25)} + 2 = 99.0201$$

Therefore, the number of shares of stock is $10,000/99.0201 = \boxed{100.99}$.
