

ACOG Guidelines on Antepartum Fetal Surveillance

MONICA PREBOTH

Am Fam Physician. 2000; Sep 1;62(5):1184-1188.

The Committee on Practice Bulletins—Obstetrics of the American College of Obstetricians and Gynecologists (ACOG) has developed clinical management guidelines on antepartum fetal surveillance. According to the committee, the **goal** of antepartum fetal surveillance **is to prevent fetal death**. The techniques of antepartum fetal surveillance, which are based on the assessment of fetal heart rate patterns, have been in clinical use for nearly 30 years. These guidelines, which replace Technical Bulletin No. 168 issued in January 1994, appear in the October 1999 issue of *Obstetrics and Gynecology*.

Techniques of Antepartum Fetal Surveillance

Several techniques for antepartum fetal surveillance currently in use are discussed in the ACOG bulletin. These include fetal movement assessment, nonstress test, contraction stress test, fetal biophysical profile, modified biophysical profile and umbilical artery Doppler velocimetry.

FETAL MOVEMENT ASSESSMENT

Fetal movement assessment occurs when the mother perceives a diminution in fetal movement. The **mother counts fetal "kicks" as a means of antepartum fetal surveillance**. The optimal number of movements and the ideal duration for counting movements have not been determined; however, numerous protocols have been reported and appear to be acceptable.

CONTRACTION STRESS TEST

The **contraction stress test** is **based on the response of the fetal heart rate to uterine contractions**. It is believed that fetal oxygenation will be transiently worsened by uterine contractions. In the fetus with suboptimal oxygenation, the resulting intermittent worsening in oxygenation will, in turn, lead to the fetal heart rate pattern of late decelerations. Uterine contractions also may provoke or accentuate a pattern of variable decelerations caused by fetal umbilical cord compression, which in some cases is associated with oligohydramnios.

The **contraction stress test** is **interpreted by the presence or absence of late fetal heart rate decelerations which are defined as decelerations that reach their nadir after the peak of the contraction and that usually persist beyond the end of the contraction**. The results of the contraction stress test are categorized in the ACOG bulletin as follows:

- **Negative:** **No late or significant variable decelerations**.
- **Positive:** **Late decelerations following 50 percent or more of contractions** (even if the contraction frequency is fewer than three in 10 minutes).
- **Equivocal/suspicious:** Intermittent late decelerations or significant variable decelerations.
- **Equivocal/hyperstimulatory:** Fetal heart rate decelerations that occur in the presence of contractions that are **more frequent than every two minutes or last longer than 90 seconds**.
- **Unsatisfactory:** Fewer than three contractions in 10 minutes or a tracing that is not interpretable.

management and is designed to help obstetricians and neonatologists minimize complications and offer patients the best possible care. Since 1960 there has been a significant increase in basic and clinical investigations on normal and pathological pregnancy in the developed world. This has provided insights into the physiopathology of pregnant women, fetuses and newborns and led to the development of new technologies bringing about a new medical subspecialty: perinatal medicine. The book is divided into eight main sections. The first examines basic preconceptional care and discusses the ethical aspects of perinatology. The next section focuses on prenatal considerations such as the nutritional aspects of gestation and puerperium, physical exercise during pregnancy, routine laboratory tests, prenatal care of multiple gestations and the role of the neonatologist in prenatal care. The third and fourth sections then explore fetal evaluation and clinical intercurrents in pregnancy respectively. The next section addresses pregnancy complications: prevention, diagnosis and management. The sixth section covers the basic aspects of congenital infections and the seventh examines labor and delivery aspects. Lastly, the final section includes chapters on neonatal assistance. Written by leading experts in obstetrics, neonatology and perinatology, this thoroughly updated comprehensive resource reflects the latest information in all areas including genetics and imaging.
