Ebel,2019-03-01 New England and nearby areas in the United States and Canada have a long and storied history of earthquakes that goes back to the times of the earliest exploration and settlement of the region by Europeans This may come as a surprise to the many people living in the region today who have never felt a local earthquake Nevertheless not only is it true but there is every reason to believe that earthquakes including some damaging earthquakes will strike New England in the future In fact in the 1960s Boston Massachusetts was given the same seismic hazard rating as Los Angeles California because both had experienced strong earthquakes in their historic pasts Since then seismologists have learned much about the rates at which earthquakes occur throughout the country and about the effects of the earthquakes when they occur Today we know that the probability of damaging earthquake shaking in Boston is about twenty five times less than in Los Angeles Even so the threat of earthquakes in Boston throughout New England and in adjacent regions is one that cannot be ignored From the 1638 so called Pilgrim s Earthquake to anticipating what the future may hold John E Ebel introduces you to the surprising history of earthquakes in the northeast corridor **Understanding Risk in an Evolving World** Alanna Simpson; Rick Murnane; Keiko Saito; Emma Phillips; Robert Reid; Anne Himmelfarb, Across the globe a consensus is emerging on the central importance of risk information in disaster risk management When risks are quantified and the potential impacts of hazards are anticipated governments communities and individuals are able to make more informed decisions This publication highlights some of the influential efforts by technical specialists institutions and governments

around the world to create and communicate risk information quickly and at low cost to improve the quality and transparency of risk information and to enable more local engagement in the production of authoritative risk information than ever before Case studies spanning 40 countries and contributed by more than 50 institutions showcase emerging best practices demonstrate how risk assessments are being used to inform disaster risk management and broader development and highlight lessons learned through these efforts *Active faults and earthquake due to continental deformation*
