Architectural Program Diagrams:

Architectural Programming: Creative Techniques for Design Professionals Robert R. Kumlin, 1995-05-22 Architectural programming is the key to successful design. It is the crucial process of gathering, organizing, and assessing a client's building use information. This process includes design concepts and program objectives, staff and employee projections, current and future space requirements, adjacencies and relationships, equipment and utility requirements, project cost, and more. This unique book and diskette provide architects, engineers, facilities managers, corporate and institutional administrators, and others with an effective method for gathering and assessing data needed to successfully design virtually any type of building, from office towers and educational facilities to laboratories and medical facilities. *The Portfolio and the Diagram*

Hyungmin Pai, Hyöng-min Pae, 2002 A history of modern architecture as a discursive practice **Architectural Programming and Predesign Manager** Robert Hershberger, 2015-09-25 In this book, first published in 1999, Hershberger presents architectural programming and predesign management in a clear, detailed manner. With numerous examples and illustrations from both his and his colleagues' experience, he shows the reader step by step how to use the techniques of architectural programming: set values, resolve issues, apply tested methods, and leverage skills when working with clients. This title will be of interest to students of architecture. Architectural and Program Diagrams Mi Young Pyo, 2012

Architecture can be as full of suspense as a graphic novel. Similar to comic strips or graphic novels, diagrams are a visual medium of communication. This makes them easy to understand even across linguistic and cultural boundaries and an ideal method of communicating ideas to clients. Today, architectural diagrams are no longer mere aids to explaining a design or reducing an idea to a simple outline; but have emerged as an art form of their own among the creative skills related to planning and building. The title *Architectural and Program Diagrams* in the series *Construction and Design Manual* brings together more than 400 pages from a predominantly international avant-garde and offers an overview of the state of the art in architectural representation across a spectrum extending from simple arrow diagrams to sober graphs and highly elaborate, often somewhat surreal collages and computer animations which trigger a wide range of intellectual and emotional responses. Diagrams tell stories. Those able to read them can follow the process by which ideas and thoughts take visual shape, find aesthetic form, and if all goes well, become part of the built environment. **Software Architecture in Practice** Len

Bass, Paul Clements, Rick Kazman, 2003 This is the eagerly anticipated revision to one of the seminal books in the field of software architecture which clearly defines and explains the topic. **Thinking with Diagrams** Alan F.

Blackwell, 2013-04-18 This book provides an introductory overview of the rapid growth in interdisciplinary research into *Thinking with Diagrams*. Diagrammatic representations are becoming more common in everyday human experience, yet they offer unique challenges to cognitive science research. Neither linguistic nor perceptual theories are sufficient to completely explain their advantages and applications. These research challenges may be part of the reason why so many diagrams are

badly designed or badly used This is ironic when the user interfaces of computer software and the worldwide web are becoming so completely dominated by graphical and diagrammatic representations This book includes chapters commissioned from leading researchers in the major disciplines involved in diagrams research They review the philosophical status of diagrams the cognitive processes involved in their application and a range of specialist fields in which diagrams are central including education architectural design and visual programming languages The result is immediately relevant to researchers in cognitive science and artificial intelligence as well as in applied technology areas such as human computer interaction and information design
