

Architecture Of Natural Light

John Coles, Naomi House

Architecture Of Natural Light:

Daylighting Derek Phillips, 2012-05-23 *Daylighting* offers a general theory and introduction to the use of natural light in architecture. The fourth of Derek Phillips's lighting books draws on his experience to illustrate how best to bring natural light into building design. As sustainability becomes a core principal for designers, daylighting comes to the fore as an alternative to artificial energy consuming light. Here Phillips makes a rational argument for considering daylight first, outlining the arguments in favour of a daylight approach and goes on to show through a series of beautifully illustrated case studies how architects have created buildings in which natural light has been shown to play a major strategic role in the development of the design of a building.

Illuminating Michelle Corrodi, Klaus Spechtenhauser, 2014-03-12 The image of open working and living spaces flooded with light has more than any other become fixed in our minds as a symbol of modernity and the spirit of the times. While the workplace has always been the focus of ergonomic studies and optimization with respect to a good provision of daylight, large glass surfaces have now become the order of the day for living spaces as well. But does this automatically make for better illumination? Taking this question as its starting point, the publication *Illuminating* thematizes central aspects of light planning, including the connection between the provision of daylight and architectural design, building orientation, the nature of the facade, the ground plan, comfort and the proportions and atmosphere of rooms. In the process, general characteristics and fundamental principles as well as subtle facets of an intelligent treatment of daylight are discussed and critically examined within an expanded architecture and culture historical context.

The Architecture of Light Mary Ann Steane, 2012-11-12 Reviewing the use of natural light by architects in the era of electricity, this book aims to show that natural light not only remains a potential source of order in architecture but that natural lighting strategies impose a usefully creative discipline on design. Considering an approach to environmental context that sees light as a critical aspect of place, this book explores current attitudes to natural light by offering a series of in-depth studies of recent projects and the particular lighting issues they have addressed. It gives a more nuanced appraisal of these lighting strategies by setting them within their broader topographic, climatic and cultural contexts.

The Architecture of Natural Light Henry Plummer, 2012 This new paperback is the first publication to consider the many effects of natural illumination in contemporary buildings. This comprehensive and thoughtful survey begins with a brief introduction to the history of architecture seen through the advances and experimentation put forward by architects over the centuries.

Illuminating Michelle Corrodi, Klaus Spechtenhauser, 2014-03 With an analysis of current and historical examples, this title presents the fundamental principles of using daylight in architecture.

Natural Light Hestia Thornbrook, 2025-01-04 *Natural Light* offers a comprehensive exploration of daylight's crucial role in architectural design and human well-being, addressing the growing disconnect between modern indoor living and our biological need for natural illumination. The book uniquely bridges scientific understanding with practical architectural solutions, examining how natural light impacts both human health and

sustainable building design Through a careful blend of historical context and contemporary research it demonstrates why proper daylighting is not merely an aesthetic choice but a fundamental aspect of human centric architecture The work progresses logically through three main sections beginning with the scientific principles of natural light and its biological effects moving to architectural strategies illustrated through real world case studies and concluding with practical implementation methods for both new construction and renovations Drawing from peer reviewed research in chronobiology and architectural studies the book presents compelling evidence for the importance of natural light in building design while offering specific solutions for common challenges such as light redirecting systems and smart glazing technologies What sets this resource apart is its accessible approach to complex technical concepts making it valuable for both professionals and informed homeowners The book addresses specific challenges across different climate zones and urban contexts providing detailed guidelines for window placement glazing selection and interior layout optimization By connecting architecture with environmental psychology and energy conservation it offers a holistic perspective on creating naturally lit environments that enhance both building performance and occupant well being The Fundamentals of Interior Architecture John Coles, Naomi House, 2007-12-13 Each element or fundamental uses theory and contemporary and historical references to illustrate the richness and diversity of design practice The book contains five sections which together encapsulate the principle ideas skills and knowledge that are employed in the creation of spatial solutions that support the needs of the client and which recognize the qualities of the building and its situation Using illustrations and photographs these elements are identified and described in a way that makes them accessible to the reader Light in Engineering, Architecture and the Environment Konrad Domke, C. A. Brebbia, 2011 The Wessex Institute of Technology has for years been convening conferences on sustainable architecture and planning design in nature heritage architecture and environmental health With the growing importance of lighting in the creation of better healthier environments the enhancement of heritage architecture and the recovery of urban areas as well as new developments in more sustainable lighting it became clear that a conference focusing on lighting issues would be useful This book contains the papers to be presented at the first International Conference on Lighting in Engineering Architecture and the Environment discussing the latest developments in a variety of topics related to light and illumination from its engineering aspects to its use in art and architecture and the effect of light on living systems and human health Ranging from discussions of technical issues regarding equipment design and light measurement to human perception of light and the effect of light on human health the book will be of interest to architectures planners environmental health experts and stage designers in academia industry and government as well as colleagues discussing the latest developments in a variety of topics related to light and illumination from its engineering aspects to its use in art and architecture and the effect of light on living systems and human health Architecture for the Books Michael J. Crosbie, 2003 This book takes a look at the architectural design of library Forty nine libraries are targeted

and includes plans of each library **Architecture - Comfort and Energy** M. Sala, C. Gallo, A. A. M. Sayigh, 1999-02-22 In this book we seek to approach the architecture energy combination and its relationship to human comfort and the environment There are chapters on thermal comfort low energy architecture dealing with various criterion for comfort in different parts of the World The book also seeks to understand how previous generations lived in harsh climates and without abundant sources of energy yet managed to design and build appropriate dwellings providing both comfort and harmony with the environment Other chapters deal with the bioclimatic concept in Vernacular Architecture the major role which climate plays at different locations and how this can dictate the shape and form of the buildings and save energy the importance of micro climate and its various elements and usage ventilation and its importance in buildings and the technology for modern architecture
