Engineering Design Applications V Andreas Öchsner, Holm Altenbach, 2023-07-27 This book gives an update on recent developments in different engineering disciplines such as mechanical materials computer and process engineering focusing on modern engineering design applications These disciplines provide the foundation for the design and development of improved structures materials and processes The modern design cycle is characterized by an interaction of different disciplines and a strong shift to computer based approaches where only a few experiments are performed for verification purposes A major driver for this development is the increased demand for cost reduction which is also connected to environmental demands In the transportation industry e g automotive this is connected to the demand for higher fuel efficiency which is related to the operational costs and the lower harm for the environment One way to fulfill such requirements is lighter structures and or improved processes for energy conversion Another emerging area is the interaction of classical engineering with the health medical and environmental sector The chapters are selected contributions of the Advanced Computational Engineering and Experimenting conference held in July 2022 in Florence Italy Applied Coatings Weih Q. Lee, 2024-05-14 APPLIED COATINGS An integrated collection of case studies providing a concise guide for professionals working with coatings materials in academia and industry In Applied Coatings Chemistry Formulation and Performance distinguished scientist Dr Weih Q Lee delivers an illuminating collection of case studies designed to connect various elements of applied coatings technology Going beyond generic discussions the author describes the fundamental chemistry formulations and properties of applied coating materials including the structural and functional components of structure property relationships as well as the foundations of applied cure kinetics and the rheology of epoxy coatings Each chapter is self contained comprehensive and can be read individually while the book remains technically and editorially integrated Core themes include structure performance relationships formulation index driven experiment design and consolidated thermal analysis Readers will also find A thorough introduction to epoxies and epoxy curing agents including oxetanes vinyl esters glycidyl methacrylate GMA isocyanate and silicone crosslinkers cationic catalysts acrylate and phenol accelerators and specialty derivatives Attentive descriptions of epoxy curing chemistry including epoxy phenolic polyamide active ester and acid or base catalyzed systems in a broader scope Comprehensive explorations of cure kinetics and rheology including model free kinetics MFK the nth order model covering Kissinger plots and the Borchardt Daniels BD approach the autocatalytic model executive quantification via curve fitting of DSC differential scanning calorimetry exotherms the rheology of non reactive fluids and the viscoelasticity of reactive coatings Practical discussions of C1S thick film surface coatings C2S structural lamination liquid and powder epoxies and phenolic coatings including fluorene monomers heterocyclic resins and polymerizable derivatives Complete treatments of coating characterization microencapsulation epoxy hybrids and non epoxy platforms adhesion of applied coatings and adhesion promotion including reactive and functional silicones Perfect for
