Psychiatry in the Elderly Robin Jacoby, Catherine Oppenheimer, 2002 Old age psychiatry continues to grow as speciality driven by research advances demographics and political will Psychiatric services and treatments for the old are improving and the outlook for further progress is encouraging In this new edition of the classic textbook of old age psychiatry Robin Jacoby and Catherine Oppenheimer have retained the coherent structure of previous editions approaching the topic under the section headings of basic sciencej clinical practice psychiatric services and specific disorders however within this logical structure they have conducted a major revision bringing in a number of new authors and covering the full range of new research The exciting developments in the field of molecular biology are covered as are the improvements in our understanding of the pathogenesis of the dementias specifically although not limited to Alzheimer s Disease All of the chapters in this new edition have been revised and updated and there are new chapters on quality of life measurement the economics of care suicide in old age hallucinations and functional symptoms in Parkinson s Disease The team of expert contributors has grown to 62 in number representing a wide range of specialities and providing input from nine different countries This has resulted in the most comprehensive and holistic review of the field Psychiatry in the Elderly continues to be essential reading for trainees practicing psychiatrists and those in other branches of care whose work brings them into contact with elderly psychiatric patients

Body Composition and Aging C. V. Mobbs, P. R. Hof, 2010-08-12 Increased adiposity and decreased muscle mass contribute substantially to age dependent disease and disability In particular age related increase in adiposity is quickly becoming a major threat to public health throughout the world Although the hypothesis that age related changes in body composition are due to lifestyle choices alone is well accepted it is a vast oversimplification This volume reflects the current knowledge in this rapidly developing field of research The first part of the book discusses the extent to which increased adiposity contributes to age related diseases and longevity The obesity paradox describing the protective role of overweight in decreasing mortality while increasing pathology is covered in depth Further chapters address specific aspects of the regulation of energy balance during aging including the effects of changes in food intake Finally the causes and consequences of loss of muscle mass and age related osteoporosis are examined A valuable help for physicians treating elderly patients this book will also be of great interest to researchers studying energy balance muscle physiology bone disease and other aspects of aging

Abstracts of Health Care Management Studies, 1981 Current significant studies of hospital management and planning Although journal articles and other published literature are included unpublished studies such as those with limited or regional distribution are also described Focuses on the hospital and its environment with emphasis on information gathered through structured surveys and studies Classified arrangement Author source subject and microfilm indexes
