Ecological Risks and Disasters - New Experiences in China and Europe Li Peilin, Laurence

Rouleau-Berger, 2015-11-19 Climate change and also other factors are capable of bringing about major disasters on a scale hitherto unimaginable. Ecological and other risks besides having scientific and technological dimensions are also a subject of study for social scientists concerned with how disasters and potential disasters are noticed, perceived, guarded against, managed once they have occurred and coped with after they have happened. This book considers a range of ecological risks and disasters and how they are managed in both China and Europe. It examines how far risks and disasters are perceived and managed in different ways in Europe and China, explores how an increasing humanitarian approach to vulnerable people being taken up in Europe is also being adopted in China, and assesses how far the management of disasters differs from wider government management of more ordinary aspects of everyday life. The book argues that the same stresses and strains which are present in normal society are there also in enhanced form in disaster situations. *Handbook of Hazards and Disaster*

Risk Reduction Ben Wisner, JC Gaillard, Ilan Kelman, 2012-03-29 The Handbook provides a comprehensive statement and reference point for hazard and disaster research, policy making and practice in an international and multi-disciplinary context. It offers critical reviews and appraisals of current state of the art and future development of conceptual, theoretical and practical approaches as well as empirical knowledge and available tools. Organized into five inter-related sections, this Handbook contains sixty-five contributions from leading scholars. Section one situates hazards and disasters in their broad political, cultural, economic and environmental context. Section two contains treatments of potentially damaging natural events/phenomena organized by major earth system. Section three critically reviews progress in responding to disasters including warning, relief and recovery. Section four addresses mitigation of potential loss and prevention of disasters under two sub-headings: governance, advocacy and self-help, and communication and participation. Section five ends with a concluding chapter by the editors. The engaging international contributions reflect upon the politics and policy of how we think about and practice applied hazard research and disaster risk reduction. This Handbook provides a wealth of interdisciplinary information and will appeal to students and practitioners interested in Geography, Environment Studies and Development Studies. *Panic Buying and Environmental Disasters* S.M. Yasir Arafat, Sujita Kumar Kar, Russell

Kabir, 2022-09-01 Panic buying is a common response during crises; however, to date it has been a significantly under-researched area. Recent evidence suggests that an environmental stimulus such as the COVID-19 pandemic, war, earthquakes, flooding, public health emergencies, SARS, MARS can trigger this phenomenon. As an environmental crisis takes its toll, the understanding of panic buying becomes overlooked. Nevertheless, panic buying causes a series of events separate from these primary events. Understanding the management of emergencies and disasters should be an integral part of dealing with panic buying, since every major environmental crisis has the potential to initiate panic buying behaviour in the general public. This

book will analyse episodes of panic buying and major environmental crisis focusing on specific prevention strategies This book is the first of its kind of approach to join up the management of panic buying during a public health emergency

Disaster Research and the Second Environmental Crisis James Kendra, Scott G. Knowles, Tricia Wachtendorf, 2019-04-04 The 50th anniversary of the Disaster Research Center of the University of Delaware provoked a discussion of the field's background, its accomplishments and its future directions. Participants representing many disciplines brought new methods to bear on perennial problems relevant to effective disaster management and policy formation. However, new concerns were raised stemming from the fact that we live today in a globally unfolding environmental crisis every bit as pressing and worrisome as that of the 1960s when the Disaster Research center was founded. This volume brings together ideas of participants from that workshop as well as other contributors. Topics include the history and evolution of disaster research, innovations in disaster management, disaster policy and ethical considerations of disaster research. Readers interested in science and technology, public policy, community action and the evolution of the social sciences will find much of interest in this collection.

Climate Change and Disaster Risk Management Walter Leal Filho, 2012-08-10 There has been some degree of reluctance in the past to consider disaster risk management within the mainstream of adaptation to climate variability and climate change. However, there is now wide recognition of the need to incorporate disaster risk management concerns in dealing with such phenomena. There is also a growing awareness of the necessity for a multi-sectoral approach in managing the effects of climate variability and climate change since this can lead to a significant reduction of risk. This book presents the latest findings from scientific research on climate variation, climate change and their links with disaster risk management. It showcases projects and other initiatives in this field that are being undertaken in both industrialised and developing countries by universities and scientific institutions, government bodies, national and international agencies, NGOs and other stakeholders. Finally, it discusses current and future challenges, identifying opportunities and highlighting the still unrealised potential for promoting better understanding of the connections between climate variation, climate change and disaster risk management worldwide.

Environmental Health Perspectives, 1993

Debating Disaster Risk Gonzalo Lizarralde, Lisa M. Bornstein, Tapan Dhar, 2025-08-19 Dealing with the risks of climate change and disaster is a political process. It produces winners and losers, mobility and permanence, radical change and continuity, relief and suffering. For some, it ultimately leads to life or death. Yet consultants, academics, humanitarian agents and politicians often simply propose well-intentioned ideas: resilience, sustainability, community participation, emergency shelter, green development, while failing to perceive the blind spots and unintended consequences of such approaches. *Debating Disaster Risk* brings together leading global experts to explore the controversies that emerge and the tough decisions that must be made when cities, people and the environment are at risk. Scholars and practitioners discuss the challenges of reducing vulnerability and rebuilding after destruction in an accessible and lively debate format with commentary by researchers, students and development workers.

from across the world They emphasize the ethical consequences of decisions about how cities and communities should prepare for and react to disasters considering issues such as housing environmental protection urban development and infrastructure recovery A valuable resource for scholars students and practitioners in a variety of fields this book provides an in depth analysis of the difficult choices we face in dealing with disasters As climate change accelerates Debating Disaster Risk invites readers to grapple with the most pressing controversies

Hazards XIX, 2006 This work presents the proceedings of the 19th in the Hazards Symposium Series run by the Institution of Chemical Engineers North West Branch since 1960

Communicating Public Health Risk José Sixto-García, Sara Pérez-Seijo, Berta García-Orosa, 2024-10-01 This important volume provides not only an in depth analysis of those risk communication strategies currently used to inform and educate the public around key health issues but also the risks and effects of radon a natural but carcinogenic gas that so far has seen relatively little wider coverage As the leading cause of lung cancer worldwide after smoking radon is an important yet hidden public health issue but informing and educating the public about its hazards and dangers is far from straightforward As well as offering a detailed overview of issues around radon itself the book asserts that public health communication should be dialogic and interactive culturally tailored to specific populations to ensure people comprehend and appreciate risk to themselves and their environments The challenges are of course significant in a pluralistic media landscape where disinformation and misinformation threaten the integrity of any message sent Featuring chapters from researchers across a range of disciplines this enlightening book will interest students scholars and professionals working in Public Health Environment Health and Communication Studies
