Adaptations and Mutations

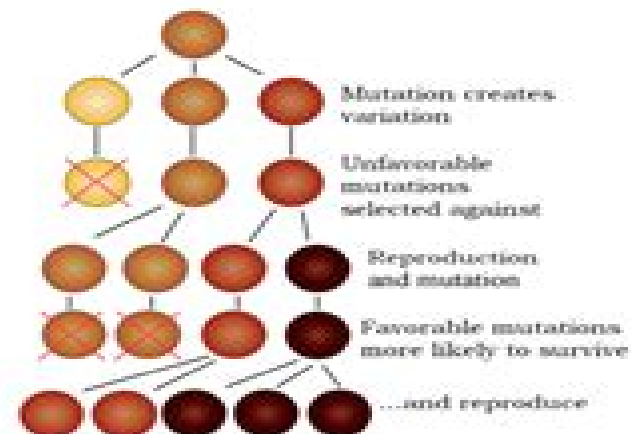

- **Adaptations** are characteristics that help an organism survive in an environment.
 - Adaptations develop when **variations** in a population occur.
- A **mutation** is a random change in the genetic makeup of an individual.
 - Mutations can be harmful, helpful, or have no effect to the organism.
 - Favorable mutations are passed down to future generations through reproduction.

Study Tip

Evolution

- **Evolution** is when the changes in the genetic makeup of a population of individuals accumulate over time.
 - Evolution causes descendents to be much different than their ancestors.
 - Eventually, it can cause a new species to arise.
- **Natural selection** is the process in which evolution is able to occur.
 - Traits become more or less common in a population depending on how beneficial they are.

Natural selection driven on both positive and negative variations, and helps organisms adapt and evolve.
