Translational Biomedical Informatics Bairong Shen, Haixu Tang, Xiaoqian Jiang, 2016-10-31 This book introduces readers to essential methods and applications in translational biomedical informatics which include biomedical big data cloud computing and algorithms for understanding omics data imaging data electronic health records and public health data The storage retrieval mining and knowledge discovery of biomedical big data will be among the key challenges for future translational research The paradigm for precision medicine and healthcare needs to integratively analyze not only the data at the same level e g different omics data at the molecular level but also data from different levels the molecular cellular tissue clinical and public health level This book discusses the following major aspects the structure of cross level data clinical patient information and its shareability and standardization and privacy It offers a valuable guide for all biologists biomedical informaticians and clinicians with an interest in Precision Medicine Informatics

Translational Informatics Philip R.O. Payne, Peter J. Embi, 2014-08-23 Integrative and translational methodologies and frameworks have transformed modern biomedical research and the delivery of clinical care This shift has been manifested in a number of ways including the rapid growth and increasing availability of high throughput bio molecular instrumentation and analysis platforms innovative clinical research programs intended to accelerate knowledge translation and initial efforts to deliver personalized healthcare informed by the genomic profiles of patients A common theme of reports and publications concerned with such transformative changes in the biomedical and healthcare domains is concerned with the challenges and opportunities related to the collection management integration analysis and dissemination of large scale heterogeneous biomedical data sets In particular the absence of well established and adopted theoretical and practical frameworks intended to address such needs is a major impediment to the realization of translational and knowledge driven healthcare in which the best possible scientific evidence is used to inform the care of every patient In this vacuum the development of integrative clinical or translational research paradigms is significantly limited by the propagation of both data and expertise silos This book details for the first time the current state of this extremely potent area of healthcare innovation and policy and defines the interaction between clinical translational science and biomedical informatics

Pediatric Biomedical Informatics John J. Hutton, 2012-12-13 Advances in the biomedical sciences especially genomics proteomics and metabolomics taken together with the expanding use of electronic health records are radically changing the IT infrastructure and software applications needed to support the transfer of knowledge from bench to bedside *Pediatric Biomedical Informatics Computer Applications in Pediatric Research* describes the core resources in informatics necessary to support biomedical research programs and how these can best be

integrated with hospital systems to receive clinical information that is necessary to conduct translational research. The focus is on the authors' recent practical experiences in establishing an informatics infrastructure in a large research-intensive children's hospital. This book is intended for translational researchers and informaticians in pediatrics but can also serve as a guide to all institutions facing the challenges of developing and strengthening informatics support for biomedical research. The first section of the book discusses important technical challenges underlying computer-based pediatric research, while subsequent sections discuss informatics applications that support biobanking and a broad range of research programs. Pediatric Biomedical Informatics provides practical insights into the design, implementation, and utilization of informatics infrastructures to optimize care and research to benefit children. Dr. John Hutton is the Vice President and Director of Biomedical Informatics at Cincinnati Children's Hospital Medical Center, Cincinnati, OH, USA. He is also Professor of Pediatrics and Associate Dean for Information Services at the University of Cincinnati College of Medicine.
