research **Fundamentals of Modern Bioprocessing** Sarfaraz K. Niazi, Justin L. Brown, 2017-07-27 Biological drug and vaccine manufacturing has quickly become one of the highest value fields of bioprocess engineering and many bioprocess engineers are now finding job opportunities that have traditionally gone to chemical engineers. **Fundamentals of Modern Bioprocessing** addresses this growing demand. Written by experts well established in the field, this book connects the principles and applications of bioprocessing engineering to healthcare product manufacturing and expands on areas of opportunity for qualified bioprocess engineers and students. The book is divided into two sections: the first half centers on the engineering fundamentals of bioprocessing, while the second half serves as a handbook offering advice and practical applications. Focused on the fundamental principles at the core of this discipline, this work outlines every facet of design, component selection, and regulatory concerns. It discusses the purpose of bioprocessing to produce products suitable for human use, describes the manufacturing technologies related to bioprocessing, and explores the rapid expansion of bioprocess engineering applications relevant to health care product manufacturing. It also considers the future of bioprocessing, the use of disposable components, which is the fastest growing area in the field of bioprocessing to replace traditional stainless steel. In addition, this text discusses the many types of genetically modified organisms, outlines laboratory techniques, includes the most recent developments, serves as a reference, and contains an extensive bibliography. Emphasizes biological manufacturing using recombinant processing, which begins with creating a genetically modified organism using recombinant techniques. **Fundamentals of Modern Bioprocessing** outlines both the principles and applications of bioprocessing engineering related to healthcare product manufacturing. It lays out the basic concepts, definitions, methods, and applications of bioprocessing. A single volume, comprehensive reference developed to meet the needs of students with a bioprocessing background, it can also be used as a source for professionals in the field.

Problem Solving in Chemical and Biochemical Engineering with POLYMATH, Excel, and MATLAB Michael B. Cutlip, Mordechai Shacham, 2008 **Problem Solving in Chemical and Biochemical Engineering with POLYMATH, Excel, and MATLAB** Second Edition is a valuable resource and companion that integrates the use of numerical problem solving in the three most widely used software packages: POLYMATH, Microsoft Excel, and MATLAB. Recently developed POLYMATH capabilities allow the automatic creation of Excel spreadsheets and the generation of MATLAB code for problem solutions. Students and professional engineers will appreciate the ease with which problems can be entered into POLYMATH and then solved independently in all three software packages while taking full advantage of the unique capabilities within each package. The book includes more than 170 problems requiring numerical solutions. This greatly expanded and revised second edition includes new chapters on getting started with and using Excel and MATLAB. It also places special emphasis on biochemical engineering with a major chapter on the subject and with the integration of biochemical problems throughout the book.
