Biotechnology and Bioactive Polymers Charles E. Carraher Jr., C.G. Gebelein, 2013-06-29 Some have predicted that the coming several decades will be the decades of biotechnology wherein cancer birth defects life span increases cosmetics biodegradation oil spills and exploration solid waste disposal and almost every aspect of our material life will be affected by this new area of science There will also be an extension of emphasis on giant molecules DNA enzymes polysaccharides lignins proteins hemoglobin and many others Biotechnology has been defined in various ways In one sense this field is older than human history and references to the human use of biotechnology derived materials can be found in the oldest human writings such as the Bible In this book biotechnology refers to the direct usage of naturally occurring materials or their uses as a feedstock including the associated biological activities and applications of these materials Bioactive polymers on the other hand are polymers which exert some type of activity on living organisms These polymers are used in agriculture controlled release systems medicine and many other areas The papers in this book describe polymers which essentially combine features of biotechnology and bioactivity *Seymour/Carraher's Polymer Chemistry* Charles E. Carraher Jr., 2003-04-30 This revolutionary and best selling resource contains more than 200 pages of additional information and expanded discussions on zeolites bitumen conducting polymers polymerization reactors dendrites self assembling nanomaterials atomic force microscopy and polymer processing This exceptional text offers extensive listings of laboratory exercises and demonstrations web resources and new applications for in depth analysis of synthetic natural organometallic and inorganic polymers Special sections discuss human genome and protonics recycling codes and solid waste optical fibers self assembly combinatorial chemistry and smart and conductive materials Chitin and Chitosan Gregorio Crini, 2022-06-15 Chitin and Chitosan Discoveries and Applications for Sustainability provides the most comprehensive knowledge on these organic biopolymers which come from the cellular makeup of crustaceans mollusks and arthropods This book synthesizes historical information fundamental properties industrial applications and recent discoveries and uses Written by an international expert on chitin and chitosan sources and uses the book discusses landmark discoveries and early uses in the research and applications of chitin and chitosan It then explores the international use of chitin and chitosan as organic solutions across various disciplines such as aquaculture agriculture food and beverage industries cosmetics and medicine Finally the book assesses their environmental applications for sustainable solutions such as wastewater treatments and future chitin and chitosan usage as an organic solution for a more sustainable green healthy planet Offers a comprehensive review of these biopolymers from their discovery to their use in our daily lives Details the main historical facts on their composition structure and properties Emphasizes the chemical and biological properties and applications of chitosan Describes key challenges and future trends Nanobiotechnology Rajesh Singh Tomar, Anurag Jyoti, Shuchi Kaushik, 2020-03-19 This new book Nanobiotechnology Concepts and Applications in Health Agriculture and Environment

presents a broad conceptual overview regarding the synthesis applications and toxicological aspects of nanobiotechnology. It focuses on the entrance into and interaction of nanomaterials in the human body which has generated intense scientific curiosity attracting much attention as well as increasing concern from the nanomaterial based industries and academia across the world. This book looks at the scientific aspects of nanomaterials used in many applications of biosciences taking an interdisciplinary approach that encompasses medicine, biology, pharmacy, physics, chemistry, engineering, nanotechnology and materials science. The volume covers the basics of nanosciences and nanotechnology, different schemes and routes of synthesis and various biological applications including sensing, medicine, drug delivery systems and remediation. Further special chapters will be devoted to nanotoxicology and the developing risk factors associated with nanosized particles during use along with the ethical issues related to nanobiotechnology.

Biotechnology Annual Review M.R. El-Gewely, 1996-06-14 The Biotechnology Annual Review series aims at covering developments in the field of biotechnology in the form of comprehensive illustrated and well referenced reviews. Recent expansion in this field both industrial and educational along with the increase in the number of new journals reporting new results has greatly increased the need for exactly this type of series continuously providing reviews. Every volume published yearly will cover a different aspect of biotechnology. The Editorial Board of Biotechnology Annual Review encourages suggestions and contributions of articles from industry or from academic institutions that would constitute a comprehensive covering of a relevant topic in biotechnology. Proposals for contributions and or suggestions for topics for future volumes in this series should be sent to the Editor Professor M R El Gewely, Department of biotechnology, University of Tromsø IMB MH Bygget N 9037 Tromsø Norway. Applications of Radiation Chemistry in the Fields of Industry, Biotechnology and Environment Margherita Venturi, Mila D'Angelantonio, 2017-03-06 The series Topics in Current Chemistry Collections presents critical reviews from the journal Topics in Current Chemistry organized in topical volumes. The scope of coverage is all areas of chemical science including the interfaces with related disciplines such as biology, medicine and materials science. The goal of each thematic volume is to give the non specialist reader whether in academia or industry a comprehensive insight into an area where new research is emerging which is of interest to a larger scientific audience. Each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole. The most significant developments of the last 5 to 10 years are presented using selected examples to illustrate the principles discussed. The coverage is not intended to be an exhaustive summary of the field or include large quantities of data but should rather be conceptual concentrating on the methodological thinking that will allow the non specialist reader to understand the information presented. Contributions also offer an outlook on potential future developments in the field.

Applications of Chitin and Chitosan Mattheus F. A. Goosen, 2020-08-18 The main driving

force behind the development of new applications for chitin and its derivative chitosan lies with the fact that these polysaccharides represent a renewable source of natural biodegradable polymers. Since chitin is the second most abundant natural polymer, academic as well as industrial scientists are faced with a great challenge to find new and practical applications for this material. This book provides an examination of the state of the art and discusses new applications as well as potential products. *Applications of Chitin and Chitosan* deals almost exclusively with applications. Previous books in the field have devoted less than 30% of their material to commercial or medical uses. In the past thirty years, substantial progress has been made on fundamental and applied research in chitosan technology. One of the driving forces behind this rapid development has been the decrease in the supply of natural resources. At the same time, there has been an increased realization that there are abundant alternative bioresources. Two factors, economics and versatility, have also stimulated interest in chitosan's utilization in various fields. Chitin and chitosan derivatives have applications in fields that range from fertilizers to pharmaceuticals. Chitosan is no longer just a waste by-product from the seafood processing industry. This material is now being utilized by industry to solve problems and to improve existing products as well as to create new ones. *Applications of Chitin and Chitosan* is illustrated with over 100 photos, charts, graphs, and figures and more than 40 tables. *Applications of Chitin and Chitosan* will be of interest to industrial personnel involved in bioprocessing as well as bioengineering students, specialists in the biomedical and biopharmaceutical industry, biochemists, food engineers, environmentalists, and microbiologists and biologists who specialize in chitosan technology. Publication: Fall 1996.

Nanoclay Reinforced Polymer Composites Mohammad Jawaaid, Abou el Kacem Qaiss, Rachid Bouhfid, 2016-08-12. This book is part of a two-volume book series that exhaustively reviews the key recent research into nanoclay reinforced polymer composites. This second volume focuses on nanoclay-based nanocomposites and bionanocomposites, fabrication, characterization, and applications. This includes classification of nanoclay, chemical modification, and processing techniques of nanocomposites. The book also provides comprehensive information about nanoclay modification and functionalization, modification of nanoclay systems, geological and mineralogical research on clays, suitability of bio-nanocomposites based on nanoclays, modelling of mechanical behaviour of halloysite-based composites, mechanical and thermal properties of halloysite nanocomposites, the effect of Nanoclays on gas barrier properties of polymers and modified nanocomposites. This book is a valuable reference guide for academics and industrial practitioners alike. Synthetic Biodegradable and Biobased Polymers Andreas Künkel, Glauco Battagliarin, Malte Winnacker, Bernhard Rieger, Geoffrey Coates, 2023-12-28. This volume presents the recent developments in synthetic biodegradable and biobased polymers. The syntheses of many polymer types such as polyesters and polyamides and also their processing technologies are discussed herein, and new aspects from fundamental and from industrial research are covered. This combination of both perspectives within this volume will be of interest for many research scientists from academia and industry and also for lectures and teachers.
