Astronomy Autoguiders:

Handbook of Practical Astronomy Günter D. Roth, 2009-06-18 The Compendium of Practical Astronomy is unique The practical astronomer whether student novice or accomplished amateur will find this handbook the most comprehensive up to date and detailed single guide to the subject available It is based on Roth's celebrated German language handbook for amateur astronomers which first appeared over 40 years ago *Instrumentation in Astronomy*, 1990 **Astronomy in the Near-Infrared - Observing Strategies and Data Reduction Techniques** Jochen Heidt, 2022-07-04 Near infrared astronomy has become one of the most rapidly developing branches in modern astrophysics Innovative observing techniques near infrared detectors with quantum efficiencies in excess of 90% highly specialised instruments as well as advanced data reduction techniques have allowed major breakthroughs in various areas like exoplanets star forming regions the supermassive black hole in the Galactic center and the high redshift Universe In this book the reader will be introduced to the basic concepts of how to prepare near infrared observations with maximized scientific return Equal weight is given to all aspects of the data reduction for both imaging and spectroscopy Information is also provided on the state of the art instrumentation available and planned on detector technology or the physics of the atmosphere all of which influence the preparation and execution of observations and data reduction techniques The beginner but also the expert will find a lot of information in compact form which is otherwise widely dispersed across the internet or other sources *A Dictionary of Astronomy* Ian Ridpath, 2012-01-19 This dictionary contains over 4 300 entries covering all aspects of astronomy from astrophysics and cosmology to galaxies and time Major entries include Big Bang theory relativity and variable stars Biographical entries on eminent astronomers are also included *Astronomy Now*, 2008 Illustrated Dictionary of Practical Astronomy C. R. Kitchin, 2012-12-06 The purpose of this book is two fold Firstly to provide a handy quick source of reference of the terms techniques instruments formulas processes etc for practising observers whether it is their first look through someone else's small telescope or whether they have spent decades building their own instruments observing with them and are regularly producing results to rival those of the professionals It is not principally aimed at professional observers but in order to be sufficiently comprehensive for its intended audience many entries have been included which will be relevant at that level In particular though the more esoteric parts of spectroscopy have not been included References to specific observatories are included if their instrumentation includes optical telescopes over 1 m in diameter or radio dishes over 20 m Individual entries for telescopes of 4 m or over are included and for the larger radio instruments plus other telescopes that may be of interest for historical or other reasons for example the 1m Yerkes refractor Spacecraft have generally not been included apart from the Hubble space telescope because their short working lives mean that most current spacecraft will no longer be operating by the time that this book is published Also the names of spacecraft are frequently changed after launch making it difficult to identify which mission is which References to commercial organisations and to

some widely available commercial products have been included but an intending purchaser should always obtain up to date information

Software Systems for Astronomy Albert R. Conrad, 2013-10-10 This book covers the use and development of software for astronomy It describes the control systems used to point the telescope and operate its cameras and spectrographs as well as the web based tools used to plan those observations In addition the book also covers the analysis and archiving of astronomical data once it has been acquired Readers will learn about existing software tools and packages develop their own software tools and analyze real data sets
