Biostatistics Public Health Practice Bagiella:

Biostatistics in Public Health Practice Emilia Bagiella, Roger Vaughan, 2014-01-23 *Basic Biostatistics*

Gerstman, 2014-02-07 *Basic Biostatistics* is a concise introductory text that covers biostatistical principles and focuses on the common types of data encountered in public health and biomedical fields. The text puts equal emphasis on exploratory and confirmatory statistical methods. Sampling, exploratory data analysis, estimation, hypothesis testing, and power and precision are covered through detailed illustrative examples. The book is organized into three parts: Part I addresses basic concepts and techniques; Part II covers analytic techniques for quantitative response variables; and Part III covers techniques for categorical responses. The Second Edition offers many new exercises as well as an all new chapter on Poisson Random Variables and the Analysis of Rates. With language examples and exercises that are accessible to students with modest mathematical backgrounds, this is the perfect introductory biostatistics text for undergraduates and graduates in various fields of public health. Features: Illustrative relevant examples and exercises incorporated throughout the book; Answers to odd numbered exercises provided in the back of the book; Instructors may request answers to even numbered exercises from the publisher; Chapters are intentionally brief and limited in scope to allow for flexibility in the order of coverage; Equal attention is given to manual calculations as well as the use of statistical software such as StatTable, SPSS, and WinPepi; Comprehensive Companion Website with Student and Instructor's Resources.

What Can Neuroscience Learn from Contemplative Practices? Zoran Josipovic, Bernard J. Baars, 2016-09-22 A recent wave of brain research has advanced our understanding of the neural mechanisms of conscious states, contents, and functions. A host of questions remain to be explored as shown by

lively debates between models of higher vs lower order aspects of consciousness as well as global vs local models Baars 2007 Block 2009 Dennett and Cohen 2011 Lau and Rosenthal 2011 Over some twenty five centuries the contemplative traditions have also developed explicit descriptions and taxonomies of the mind to interpret experiences that are often reported in contemplative practices Radhakrishnan Rinbochay reflexivity or self knowing associated with consciousness the sense of self and consciousness and aspects of consciousness that are said to continue during sleep These real or claimed aspects of consciousness have not been fully integrated into scientific models so far This Research Topic in Consciousness Research aims to provide a forum for theoretical proposals new empirical findings integrative literature reviews and methodological improvements inspired by meditation based models We include a broad array of topics including but not limited to replicable findings from a variety of systematic mental practices changes in brain functioning and organization that can be attributed to such practices their effects on adaptation and neural plasticity measurable effects on perception cognition affect and self referential processes We include contributions that address the question of causal attribution Many published studies are correlational in nature because of the inherent difficulty of conducting longitudinal experiments based on a major lifestyle decision such as the decision to commit to a mental practice over a period of years We also feature clinical and case studies integrative syntheses and significant opinion articles Basic Biostatistics for Public Health Practice B Burt Gertsman,2008
