Bird Nests And Construction Behaviour:

Bird Nests and Construction Behaviour Mike Hansell, 2000-08-31 *Bird Nests and Construction Behaviour* provides a broad view of our understanding of the biology of the nests bowers and tools made by birds It illustrates how among vertebrates the building abilities of birds are more impressive and consistent than for any other builders other than ourselves yet birds seem to require no special equipment and use quite uncomplicated behaviour In doing so the book raises general issues in the field of behavioural ecology including the costs of reproduction sexual selection and the organisation and complexity of behaviour Written for students and researchers of animal behaviour behavioural ecology and ornithology it will nevertheless make fascinating reading for architects and engineers interested in understanding how structures are created by animals

Thinking like a Parrot Alan B. Bond, Judy Diamond, 2019-07-02 From two experts on wild parrot cognition a close look at the intelligence social behavior and conservation of these widely threatened birds People form enduring emotional bonds with other animal species such as dogs

cats and horses For the most part these are domesticated animals with one notable exception many people form close and supportive relationships with parrots even though these amusing and curious birds remain thoroughly wild creatures What enables this unique group of animals to form social bonds with people and what does this mean for their survival In Thinking like a Parrot Alan B Bond and Judy Diamond look beyond much of the standard work on captive parrots to the mischievous inquisitive and astonishingly vocal parrots of the wild Focusing on the psychology and ecology of wild parrots Bond and Diamond document their distinctive social behavior sophisticated cognition and extraordinary vocal abilities Also included are short vignettes field notes on the natural history and behavior of both rare and widely distributed species from the neotropical crimson fronted parakeet to New Zealand s flightless ground dwelling kakapo This composite approach makes clear that the behavior of captive parrots is grounded in the birds wild ecology and evolution revealing that parrots ability to bond with people is an evolutionary accident a by product of the intense sociality and flexible behavior that characterize their lives Despite their adaptability and intelligence however nearly all large parrot species are rare threatened or endangered To successfully manage and restore these wild populations Bond and Diamond argue we must develop a fuller understanding of their biology and the complex set of ecological and behavioral traits that has led to their vulnerability Spanning the global distribution of parrot species Thinking like a Parrot is rich with surprising insights into parrot intelligence flexibility and even in the face of threats resilience
