An Introduction To Digital Image Processing With Matlab Solution Manual:

Digital Image Processing and Analysis Scott E Umbaugh, 2017-11-30 Digital image processing and analysis is a field that continues to experience rapid growth with applications in many facets of our lives. Areas such as medicine, agriculture, manufacturing, transportation, communication systems, and space exploration are just a few of the application areas. This book takes an engineering approach to image processing and analysis, including more examples and images throughout the text than the previous edition. It provides more material for illustrating the concepts along with new PowerPoint slides. The application development has been expanded and updated, and the related chapter provides step-by-step tutorial examples for this type of development. The new edition also includes supplementary exercises as well as MATLAB-based exercises to aid both the reader and student in development of their skills.

Sea Ice Image Processing with MATLAB® Qin Zhang, Roger Skjetne, 2018-02-13 Sea Ice Image Processing with MATLAB addresses the topic of image processing for the extraction of key sea ice characteristics from digital photography, which is of great relevance for Arctic remote sensing and marine operations. This valuable guide provides tools for quantifying the ice environment that needs to be identified and reproduced for such testing. This includes fit-for-purpose studies of existing vessels, new build conceptual design, and detailed engineering design studies for new developments and studies of demanding marine operations involving multiple vessels and operational scenarios in sea ice. A major contribution of this work is the development of automated computer algorithms for efficient image analysis. These are used to process individual sea ice images and video streams of images to extract parameters such as ice floe size distribution and ice types. Readers are supplied with Matlab source codes of the algorithms for the image processing methods discussed in the book, made available as online material. Features: Presents the first systematic work using image processing techniques to identify ice floe size distribution from aerial images. Helps identify individual ice floe and obtain floe size distributions for Arctic offshore operations and transportation. Explains specific algorithms that can be combined to solve various problems during polar sea ice investigations. Includes MATLAB codes useful not only for academics but for ice engineers and scientists to develop tools applicable in different areas such as sustainable arctic marine and coastal technology research. Provides image processing techniques applicable to other fields like biomedicine, material science, etc.
