Non-Conventional Copyright

Enrico Bonadio, Nicola Lucchi, 2018-10-26 Copyright law has always somehow managed to adapt to new technological and social developments as well as to new artistic and creative practices. However every time such a development occurs the legitimate question arises if the system is adaptable or if the breakthrough is so gigantic that a new system needs to be elaborated. In any case new scholarly reflections are needed in regular intervals and that is exactly the purpose of this fascinating edited collection by Enrico Bonadio and Nicola Lucchi on non conventional copyright exploring from various angles the copyright issues of all sorts of creations ranging from unconventional art forms new music and atypical cultural practices to new advances in technology not forgetting to investigate the delicate issues around copyright on illegal and immoral works. Christophe Geiger University of Strasbourg France Copyright law constantly evolves to keep up with societal changes and technological advances. Contemporary forms of creativity can threaten the comfortable conceptions of copyright law as creative people continually find new ways of expressing themselves. In this context Non Conventional Copyright identifies possible new spaces for copyright protection. With current copyright law in mind the contributions explore if the law should be more flexible as to whether new or unconventional forms of expression including graffiti tattoos land art conceptual art and bio art engineered DNA sport movements jokes magic tricks DJ sets perfume making typefaces or illegal and immoral works deserve protection. Vitally the contributors suggest that it may be time to challenge some of the basic tenets of copyright laws by embracing more flexible ways to identify protectable works and interpret the current requirements for protection. Additionally some contributors cast doubts about whether copyright is the right instrument to address and regulate these forms of expression. Contemporary in topic this thought provoking book will be essential reading for intellectual property law scholars practitioners and policymakers. Creative people and those involved in the creative industries will also find this book an engaging read. Contributors include E Bonadio S Burke C Cronin T Dagne T W Dornis F J Dougherty T M Gates M P George E Haber S Karapapa Y M King T Iverson N Lucchi G Mazziotti J McCutcheon L McDonagh M Maggiore P Mezei M Mimler A G Scaria C Y N Smith X Tang *Routledge Handbook of Art, Science, and Technology Studies* Hannah Rogers, Megan Halpern, Dehlia Hannah, Kathryn de Ridder-Vignone, 2021-12-22 Art and science work is experiencing a dramatic rise coincident with burgeoning Science and Technology Studies. STS interest in this area Science has played the role of muse for the arts inspiring imaginative reconfigurations of scientific themes and exploring their cultural resonance. Conversely the arts are often deployed in the service of science communication illustration and popularization. STS scholars have sought to resist the instrumentalization of the arts by the sciences emphasizing studies of theories and practices across disciplines and the distinctive and complementary contributions of each. The manifestation of this commonality of creative and epistemic practices is the emergence of Art Science and Technology Studies ASTS as the

interdisciplinary exploration of art science This handbook defines the modes practices crucial literature and research interests of this emerging field It explores the questions methodologies and theoretical implications of scholarship and practice that arise at the intersection of art and STS Further ASTS demonstrates how the arts are intervening in STS Drawing on methods and concepts derived from STS and allied fields including visual studies performance studies design studies science communication and aesthetics and the knowledge of practicing artists and curators ASTS is predicated on the capacity to see both art and science as constructions of human knowledge making Accordingly it posits a new analytical vernacular enabling new ways of seeing understanding and thinking critically about the world This handbook provides scholars and practitioners already familiar with the themes and tensions of art science with a means of connecting across disciplines It proposes organizing principles for thinking about art science across the sciences social sciences humanities and arts Encounters with art and science become meaningful in relation to practices and materials manifest as perceptual habits background knowledge and cultural norms As the chapters in this handbook demonstrate a variety of STS tools can be brought to bear on art science so that systematic research can be conducted on this unique set of knowledge making practices

Gene Editing, Law, and the Environment Irus Braverman, 2017-07-20 Technologies like CRISPR and gene drives are ushering in a new era of genetic engineering wherein the technical means to modify DNA are cheaper faster more accurate more widely accessible and with more far reaching effects than ever before These cutting edge technologies raise legal ethical cultural and ecological questions that are so broad and consequential for both human and other than human life that they can be difficult to grasp What is clear however is that the power to directly alter not just a singular form of life but also the genetics of entire species and thus the composition of ecosystems is currently both inadequately regulated and undertheorized In Gene Editing Law and the Environment distinguished scholars from law the life sciences philosophy environmental studies science and technology studies animal health and religious studies examine what is at stake with these new biotechnologies for life and law both human and beyond
