An Introduction To Identification Dover Books On Electrical Engineering:

An Introduction to Identification J. P. Norton, 2009-01-01 Suitable for advanced undergraduates and graduate students this text covers the theoretical basis for mathematical modeling as well as a variety of identification algorithms and their applications 1986 edition **Active Fault-Tolerant Control Systems** Tushar Jain, Joseph J. Yamé, Dominique Sauter, 2017-10-20 The book introduces novel algorithms for designing fault tolerant control FTC systems using the behavioral system theoretic approach and presents a demonstration of successful novel FTC mechanisms on several benchmark examples The authors also discuss a new transient management scheme which is an essential requirement for the implementation of active FTC systems and two data driven methodologies that are broadly classified as active FTC systems the projection based approach and the online redesign approach These algorithms do not require much a priori information about the plant in real time and in addition this novel implementation of active FTC systems circumvents various weaknesses induced by using a diagnostic module in real time The book provides graduate students taking masters and doctoral courses in mathematics control and electrical engineering an excellent stepping stone for their research It also appeals to practitioners interested to apply innovative fail safe control techniques CONTROL SYSTEMS, ROBOTICS AND AUTOMATION - Volume VI Heinz D. Unbehauen, 2009-10-11 This Encyclopedia of Control Systems Robotics and Automation is a component of the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias This 22 volume set contains 240 chapters each of size 5000 30000 words with perspectives applications and extensive illustrations It is the only publication of its kind carrying state of the art knowledge in the fields of Control Systems Robotics and Automation and is aimed by virtue of the several applications at the following five major target audiences University and College Students Educators Professional Practitioners Research Personnel and Policy Analysts Managers and Decision Makers and NGOs *Mathematical Modeling and Simulation of Systems* Serhiy Shkarlet, Anatoliy Morozov, Alexander Palagin, Dmitri Vinnikov, Nikolai Stoianov, Mark Zhelezniak, Volodymyr Kazymyr, 2022-02-23 This book contains works on mathematical and simulation modeling of processes in various domains ecology and geographic information systems IT industry and project management The development of complex multicomponent systems requires an increase in accuracy efficiency and adequacy while reducing the cost of their creation The studies presented in the book are useful to specialists who involved in the development of real events models analog management and decision making models production models and software products Scientists can get acquainted with the latest research in various decisions proposed by leading scholars and identify promising directions for solving complex scientific and practical problems The chapters of this book contain the contributions presented on the 16th International Scientific practical Conference MODS June 28 July 01 2021 Chernihiv Ukraine *Identification of Dynamic Systems* Rolf Isermann, Marco Münchhof, 2010-11-22 Precise dynamic models of processes are required for many applications ranging from control engineering to the natural

sciences and economics Frequently such precise models cannot be derived using theoretical considerations alone Therefore they must be determined experimentally This book treats the determination of dynamic models based on measurements taken at the process which is known as system identification or process identification Both offline and online methods are presented i e methods that post process the measured data as well as methods that provide models during the measurement The book is theory oriented and application oriented and most methods covered have been used successfully in practical applications for many different processes Illustrative examples in this book with real measured data range from hydraulic and electric actuators up to combustion engines Real experimental data is also provided on the Springer webpage allowing readers to gather their first experience with the methods presented in this book Among others the book covers the following subjects determination of the non parametric frequency response fast Fourier transform correlation analysis parameter estimation with a focus on the method of Least Squares and modifications identification of time variant processes identification in closed loop identification of continuous time processes and subspace methods Some methods for nonlinear system identification are also considered such as the Extended Kalman filter and neural networks The different methods are compared by using a real three mass oscillator process a model of a drive train For many identification methods hints for the practical implementation and application are provided The book is intended to meet the needs of students and practicing engineers working in research and development design and manufacturing

Advanced Control Methods for Industrial Processes Pablo A. López-Pérez, Omar Jacobo Santos Sánchez, Liliam Rodríguez Guerrero, Patricio Ordaz, 2025-06-09 A detailed introduction to mathematical models for new and established control engineers Control engineering is a system that helps us understand electrical physical chemical and biochemical systems through the use of mathematical modeling using inputs outputs and simulations These experimental platforms are implemented in most systems of modern advanced control engineering Advanced Control Methods for Industrial Processes provides a solid grounding in traditional control techniques It emphasizes practical application methods alongside the underlying theory and core instrumentation Each chapter discusses the full profile of the technology covered from the field layer and control layer to its implementation It also includes the interfaces for advanced control systems between controllers and systems theory between different layers and between operators systems Through an emphasis on the practical issues of components devices and hardware circuits the book offers working principles and operation mechanisms that allow an engineer to put theory into practice for the advanced control techniques Advanced Control Methods for Industrial Processes readers will also find A practical overview on advanced control methods applied to real time and in silico systems Specific parameters install procedures calibration and configuration methodologies necessary to conduct the relevant models Clear insights into the necessary mathematical models Tutorial material to facilitate the understanding of core concepts Advanced Control Methods for Industrial Processes is an ideal companion for process engineers control engineers and chemists in industry

Advances in Computer Science

for Engineering and Education Zhengbing Hu, Sergey Petoukhov, Ivan Dychka, Matthew He, 2018-05-11 This book features high quality peer reviewed research papers presented at the First International Conference on Computer Science Engineering and Education Applications ICCSEEA2018 held in Kiev Ukraine on 18 20 January 2018 and organized jointly by the National Technical University of Ukraine Igor Sikorsky Kyiv Polytechnic Institute and the International Research Association of Modern Education and Computer Science The state of the art papers discuss topics in computer science such as neural networks pattern recognition engineering techniques genetic coding systems deep learning with its medical applications as well as knowledge representation and its applications in education It is an excellent reference resource for researchers graduate students engineers management practitioners and undergraduate students interested in computer science and their applications in engineering and education

Control System Problems Anastasia Veloni, Alex Palamides, 2018-09-03 Using a practical approach that includes only necessary theoretical background this book focuses on applied problems that motivate readers and help them understand the concepts of automatic control The text covers servomechanisms hydraulics thermal control mechanical systems and electric circuits It explains the modeling process introduces the problem solution and discusses derived results Presented solutions are based directly on math formulas which are provided in extensive tables throughout the text This enables readers to develop the ability to quickly solve practical problems on control systems

Eine alternative, datenbasierte Systemdarstellung und deren Anwendung für die Analyse und den Entwurf von Regelkreisen Tim Könings, 2017-02-18 Tim Könings entwickelt ein Verfahren für den datenbasierten Entwurf und die Analyse von Regelkreisen und Diagnosesystemen Zu diesem Zweck wird eine datenbasierte Realisierung zweier alternativer Systemdarstellungen vorgeschlagen und entsprechende Algorithmen zu deren offline und online Berechnung hergeleitet Daraus ergibt sich eine Vielzahl von Möglichkeiten regelungstechnisch relevante Größen wie z B Gap Metrik und Stabilitätsradius aber auch Reglerentwurfsverfahren in einer datenbasierten Form umzusetzen Die so entwickelten Methoden werden mithilfe von drei industrierelevanten Fallbeispielen verifiziert und in Bezug auf deren potentielle Anwendungsfelder hin untersucht
