## **Australia S Meteorite Craters A W R Bevan:**

*Australia's Meteorite Craters* Kenneth McNamara, 2010-01-01 On Earth catastrophic impact of an asteroid or comet with truly global consequences has not happened during our written history and the threat seems very small Giant scars on our planet's surface are relics of an impact history stretching back more than 2 billion years and there is no assurance it cannot happen again In Australia there are 36 structures ranging from tens of metres to tens of kilometres in diameter and recognised to varying degrees of certainty as having been formed by giant meteorite impact In clear and concise language this book begins with ancient beliefs and myths about craters and then explains how they are actually formed and provides details of their structure Using the record in the rocks the authors also assess the likelihood of future impacts and their possible effects *The History of Meteoritics and Key Meteorite Collections* Gerald Joseph Home McCall, A. J.

Bowden, Richard John Howarth, 2006 This Special Publication has 24 papers with an international authorship and is prefaced by an introductory overview which presents highlights in the field The first section covers the acceptance by science of the reality of the falls of rock and metal from the sky an account that takes the reader from BCE before common era to the nineteenth century The second section details some of the world's most important collections in museums their origins and development The Smithsonian chapter also covers the astonishingly numerous finds in the cold desert of Antarctica by American search parties There are also contributions covering the finds by Japanese parties in the Yamato mountains and the equally remarkable discoveries in the hot deserts of Australia North Africa Oman and the USA The other seven chapters take the reader through the revolution in scientific research on meteoritics in the later part of the twentieth century including terrestrial impact cratering and extraordinary showers of glass from the sky tektites now known to be Earth impact sourced Finally the short epilogue looks to the future **Encyclopedic Atlas of Terrestrial Impact Craters** Enrico Flamini, Mario

Di Martino, Alessandro Coletta, 2019-06-25 This comprehensive atlas explains the genesis and evolution of impact known craters on Earth presenting a wealth of radar images from the Italian COSMO SkyMed satellites that were acquired at the same frequency spatial resolution operating mode and illumination allowing excellent comparison of different impact structures It also discusses in detail the processes that have hidden or erased terrestrial impact craters and clearly explains the basic principles of remote sensing and the COSMO SkyMed system and radar instruments Also the optical satellite remote sensing technique used to produce the optical images is described The main section documents each of the exposed craters officially recognized as caused by meteoritic impact presenting a table with the COSMO SkyMed radar image and where available a Sentinel optical image and a photograph taken in situ A short accompanying text reports the location context geographical coordinates and other ancillary information to support future researches **Large Meteorite**

**Impacts and Planetary Evolution VI** Wolf Uwe Reimold, Christian Koeberl, 2021-09-23 This volume contains a sizable suite of contributions dealing with regional impact records Australia Sweden impact craters and impactites early Archean impacts

and geophysical characteristics of impact structures shock metamorphic investigations post impact hydrothermalism and structural geology and morphometry of impact structures on Earth and Mars *The Geology of Australia* David Johnson, 2004-08-24 The Geology of Australia provides an introduction to geology set within the Australian context

**Geology, Tectonics and Natural Resources of Arabia and its Surroundings** A. Scharf, M. Al-Kindi, A. Racey, 2025-09-14 The Arabian Plate displays a well preserved almost continuous geological record of the last one billion years of Earth's history and consequently provides a natural laboratory for the study of a wide variety of geological processes The region is also endowed with major hydrocarbon and mineral resources of global importance An understanding of the geology and tectonics across the region is essential for the future exploration and production of these resources and for investigating the geological options for carbon capture and storage in the region which has a significant role to play in the energy transition This volume provides significant new data on the geology tectonics and natural resources of the Arabian Plate and its surroundings A diverse range of papers is presented offering new data ideas and review articles on the geology and tectonics of Arabia and adjacent areas covering the Neoproterozoic to present day **AGSO Journal of Australian Geology & Geophysics**, 1997

**Treatise on Geochemistry**, 2013-10-19 This extensively updated new edition of the widely acclaimed Treatise on Geochemistry has increased its coverage beyond the wide range of geochemical subject areas in the first edition with five new volumes which include the history of the atmosphere geochemistry of mineral deposits archaeology and anthropology organic geochemistry and analytical geochemistry In addition the original Volume 1 on Meteorites Comets and Planets was expanded into two separate volumes dealing with meteorites and planets respectively These additions increased the number of volumes in the Treatise from 9 to 15 with the index appendices volume remaining as the last volume Volume 16 Each of the original volumes was scrutinized by the appropriate volume editors with respect to necessary revisions as well as additions and deletions As a result 27% were republished without major changes 66% were revised and 126 new chapters were added In a many faceted field such as Geochemistry explaining and understanding how one sub field relates to another is key Instructors will find the complete overviews with extensive cross referencing useful additions to their course packs and students will benefit from the contextual organization of the subject matter Six new volumes added and 66% updated from 1st edition The Editors of this work have taken every measure to include the many suggestions received from readers and ensure comprehensiveness of coverage and added value in this 2nd edition The esteemed Board of Volume Editors and Editors in Chief worked cohesively to ensure a uniform and consistent approach to the content which is an amazing accomplishment for a 15 volume work 16 volumes including index volume **Asteroids Impacts, Crustal Evolution and Related Mineral Systems with Special Reference to Australia** Andrew Y. Glikson, Franco Pirajno, 2018-03-12 This book presents a comprehensive overview of Australian impact structures and related mineralization including a discussion of the significance of many of these structures for crustal evolution The book focuses in

particular on Archaean impact ejecta fallout units in the Pilbara Craton of Western Australia large exposed and buried impact structures and on the geophysical evidence for possible to probable impact structures Thanks to their long term geological stability Precambrian and younger terrains in the Australian continent contain 38 confirmed impact structures and 43 ring and dome structures many of which constitute possible to probable asteroid impact structures The impact structures have been the subject of more than half a century of studies and range from several tens of meter large craters to buried structures larger than 100 km in diameter Discoveries of impact fallout units in the Pilbara Craton have defined the Pilbara as one of the two best documented terrains where Archaean impact ejecta fallout deposits are identified the other terrain being the Kaapvaal Craton in southern Africa A synthesis of evidence from both cratons indicates periods of large asteroid bombardments during 3 47 2 48 billion years ago including peak bombardment about 3 25 3 22 billion years ago The latter period coincides with an abrupt transformation of an early Archaean granite greenstone crust to mid to late Archaean semi continental crustal regimes underpinning the significance of heavy asteroid impact events for crustal evolution Apart from proven impact structures Australian terrains display a range of circular features including morphological and drainage rings circular lakes volcanic craters tectonic domes oval granite bodies mafic igneous plugs salt diapirs and magnetic gravity and seismic anomalies many of which are of a likely impact origin Thermal and hydrothermal processes associated with impact cratering bear important consequences for the formation of mineral deposits such as Ni at Sudbury Pb Zn at Siljan and Kentland Impact structures may also provide sites for the accumulation of hydrocarbons whereas in some instances fracturing associated with impact structures allows outward migration of oil and gas      Records of the Western Australian Museum Western Australian Museum,1991
