Automated Reasoning 33 Basic Research Problems:

Automated Reasoning and Its Applications Robert Veroff, Gail W. Pieper, 1997 The contributors are among the world's leading researchers in automated reasoning. Their essays cover the theory, software, system design, and use of these systems to solve real problems. The primary objective of automated reasoning, which includes automated deduction and automated theorem proving, is to develop computer programs that use logical reasoning for the solution of a wide variety of problems, including open questions. The essays in *Automated Reasoning and Its Applications* were written in honor of Larry Wos, one of the founders of the field. Wos played a central role in forming the culture of automated reasoning at Argonne National Laboratory. He and his colleagues consistently seek to build systems that search huge spaces for solutions to difficult problems and proofs of significant theorems. They have had numerous notable successes. The contributors are among the world's leading researchers in automated reasoning. Their essays cover the theory, software, system design, and use of these systems to solve real problems. Contributors: Robert S. Boyer, Shang Ching Chou, Xiao Shan Gao, Lawrence Henschen, Deepak Kapur, Kenneth Kunen, Ewing Lusk, William McCune, J. Strother Moore, Ross Overbeek, Lawrence C. Paulson, Hantao Zhang, Jing Zhong Zhang.

Automated Reasoning Robert Stephen Boyer, 2012-12-06 These essays have been written to honor W. W. Bledsoe, a scientist who has contributed to such diverse fields as mathematics, systems analysis, pattern recognition, biology, artificial intelligence, and automated reasoning. The first essay provides a sketch of his life, emphasizing his scientific contributions. The diversity of the fields to which Bledsoe has contributed is reflected in the range of the other essays, which are original scientific contributions by some of his many friends and colleagues. Bledsoe is a founding father of the field of automated reasoning, and a majority of the essays are on that topic. These essays are collected together here not only to acknowledge Bledsoe's manifold and substantial scientific contributions but also to express our appreciation for the great care and energy that he has devoted to nurturing many of the scientists working in those scientific fields he has helped found. Robert S. Boyer, Austin, February 1991. ix Acknowledgements. Thanks to Larry Wos, editor of the *Journal of Automated Reasoning*, and Derek Middleton and Martin Scrivener, Kluwer Academic editors, for supporting the idea of initiating this collection of essays. Thanks to A. Michael Ballantyne and Michael Spivak for help with L^AT_EX, especially in identifying many formatting problems and providing fixes.
