Formal Methods and Software Engineering Jim Davies, Wolfram Schulte, Mike Barnett, 2004-10-28 Formal engineering methods are changing the way that software systems are developed. With language and tool support they are being used for automatic code generation and for the automatic abstraction and checking of implementations. In the future they will be used at every stage of development: requirements specification, design, implementation, testing, and documentation. The ICFEM series of conferences aims to bring together those interested in the application of formal engineering methods to computer systems. Researchers and practitioners from industry, academia, and government are encouraged to attend and to help advance the state of the art. Authors are strongly encouraged to make their ideas as accessible as possible, and there is a clear emphasis upon work that promises to bring practical, tangible benefit. Reports of case studies should have a conceptual message; theory papers should have a clear link to application; and papers describing tools should have an account of results. ICFEM 2004 was the sixth conference in the series and the first to be held in North America. Previous conferences were held in Singapore, China, UK, Australia, and Japan. The Programme Committee received 110 papers and selected 30 for presentation. The final versions of those papers are included here, together with 2 page abstracts for the 5 accepted tutorials and shorter abstracts for the 4 invited talks.

Handbook of Networked and Embedded Control Systems Dimitrios Hristu-Varsakelis, William S. Levine, 2007-11-14 The vast majority of control systems built today are embedded; that is, they rely on built-in special-purpose digital computers to close their feedback loops. Embedded systems are common in aircraft, factories, chemical processing plants, and even in cars: a single high-end automobile may contain over eighty different computers. The design of embedded controllers and of the intricate automated communication networks that support them raises many new questions, practical as well as theoretical, about network protocols, compatibility of operating systems, and ways to maximize the effectiveness of the embedded hardware. This handbook, the first of its kind, provides engineers, computer scientists, mathematicians, and students a broad, comprehensive source of information and technology to address many questions and aspects of embedded and networked control. Separated into six main sections: Fundamentals, Hardware, Software, Theory, Networking, and Applications, this work unifies into a single reference many scattered articles, websites, and specification sheets. Also included are case studies, experiments, and examples that give a multifaceted view of the subject encompassing computation and communication considerations.

Communications Standard Dictionary Martin Weik, 1995-12-31 Now in its Third Edition, the Communications Standard Dictionary maintains its position as the most comprehensive dictionary covering communications technologies available. A one-of-a-kind reference, this dictionary remains unmatched in the breadth and scope of its coverage and its primary reference for communications, computer, data processing, and control systems professionals.

Engineering includes a set of rigorously reviewed world class manuscripts addressing and detailing state of the art research projects in the areas of Computing Sciences Software Engineering and Systems Advances and Innovations in Systems Computing Sciences and Software Engineering includes selected papers from the conference proceedings of the International Conference on Systems Computing Sciences and Software Engineering SCSS 2006 which was part of the International Joint Conferences on Computer Information and Systems Sciences and Engineering CISSE 2006 All aspects of the conference were managed on line not only the reviewing submissions and registration processes but also the actual conference Conference participants authors presenters and attendees only needed an internet connection and sound available on their computers in order to be able to contribute and participate in this international ground breaking conference The on line structure of this high quality event allowed academic professionals and industry participants to contribute work and attend world class technical presentations based on rigorously refereed submissions live without the need for investing significant travel funds or time out of the office Suffice to say that CISSE received submissions from more than 70 countries for whose researchers this opportunity presented a much more affordable dynamic and well planned event to attend and submit their work to versus a classic on the ground conference The CISSE conference audio room provided superb audio even over low speed internet connections the ability to display PowerPoint presentations and cross platform compatibility the conferencing software runs on Windows Mac and any other operating system that supports Java In addition the conferencing system allowed for an unlimited number of participants which in turn granted CISSE the opportunity to allow all participants to attend all presentations as opposed to limiting the number of available seats for each session
