Materials management has become an important activity in both manufacturing and service organizations. Rapid changes in the industrial environment such as the introduction of automation and Just In Time and demands for increased productivity and quality have increased the need for all personnel to be concerned with total control of materials. Clearly this trend will continue and materials management will play an increasingly vital role in organizational success especially for operations that are becoming automated. Materials management will be more critical in many service organizations where the materials group has received little attention in the past. This book covers the basic materials management function and provides valuable insights into various other major functions related to it. We believe that each of these manufacturing, marketing, finance, quality assurance, and engineering is vitally involved in materials management and any coverage of the subject that excludes these functions offers too narrow a perspective. With increasing demand for materials managers, human resource requirements will be satisfied by individuals trained within the discipline and by personnel who have worked in other fields. The dimensions of materials management have grown so rapidly that many practicing managers are not aware that they are fulfilling material management functions. It is important that all individuals have the basic knowledge required to perform their roles in these organizations.
