Apoptosis Senescence And Cancer Apoptosis Senescence And Cancer:

Apoptosis, Senescence and Cancer David A. Gewirtz, Shawn E. Holt, Steven Grant, 2007-12-17 Provides insight into established practices and research into apoptosis and senescence by examining techniques and research in the fields of cell death pathways senescence growth arrest drugs and resistance DNA damage response and other topics which still hold mysteries for researchers This book concludes with established cancer therapies Beyond Apoptosis Igor B. Roninson, J. Martin Brown, Dale E. Bredesen, 2008-09-19 Addressing a major field of interest for oncologists cell biologists and other biomedical researchers Beyond Apoptosis provides an overview of how different biological mechanisms of cell death senescence and mitotic catastrophe stop the growth of tumor cells treated with anticancer agents Written by internationally renowned contributors this t Tumor Dormancy, Quiescence, and Senescence, Volume 2 M.A. Hayat, 2013-11-29 In this second volume in the series exploring Tumor Dormancy Quiescence and Cellular Senescence discussion is focused on the role of tumor dormancy in diseases such as breast cancer melanoma prostate cancer liver cancer and lung cancer M A Hayat the series editor writes in the preface that little is known of factors regulating the transition of residual cancer into a dormant state or the subsequent reinitiation of growth A majority of us he says have in situ tumors that may remain dormant or may progress into a lethal form of cancer the former are prevented from recruiting their own blood supply Section I covers Molecular Mechanisms with chapters on the role of NAE inhibitor MLN4924 oncogene induced senescence the role played by mitogen activated protein kinase in the induction of cellular senescence mechanisms of premature cell senescence and other topics Section II examines Tumor and Cancer discussing defects in chromatin structure and diseases the role of fibrosis in tumor progression and the dormant to proliferative switch the function of ING proteins in cancer and senescence and more The final section is devoted to Stem Cells and Cancer Stem Cells featuring chapters showing that senescent derived pluripotent stem cells are able to redifferentiate into fully rejuvenated cells that the transcription factor Gata2 regulates quiescence in haematopoietic stem and progenitor cells and discussing dormancy and recurrence of cancer stem cells in bone The contributors point out that the quiescent state regulates hematopoietic stem cells and muscle stem cells and detail the role of kinase in the mediation of reversible quiescent state in a subset of ovarian pancreatic and colon cancers Molecular mechanisms underlying stress induced cellular senescence and accumulation of reactive oxygen species and induction of premature senescence are also presented Discussion includes the important role of microRNAs in oxidative stress induced apoptosis and senescence and the effect of microRNA as a modulator of cell proliferation in lung cancer The book includes an explanation of the suppression of cellular senescence in glioblastoma brain tumor Taking a broad and varied perspective this volume was written by 70 contributors representing 11 countries **Autophagy and Senescence in Cancer Therapy**, 2021-04-13 Advances in Cancer Research Volume 150 the latest release in this ongoing series covers the relationship s between autophagy and senescence how they are defined and the influence of these cellular responses on tumor dormancy

and disease recurrence Specific sections in this new release include Autophagy and senescence converging roles in pathophysiology Cellular senescence and tumor promotion role of the unfolded protein response autophagy and senescence in cancer stem cells Targeting the stress support network regulated by autophagy and senescence for cancer treatment Autophagy and PTEN in DNA damage induced senescence mTOR as a senescence manipulation target A forked road and more Addresses the relationship between autophagy and senescence in cancer therapy Covers autophagy and senescence in tumor dormancy Explores autophagy and senescence in disease recurrence *The Oncogenomics Handbook* William J. LaRochelle, Richard A. Shimkets, 2007-11-09 An integrated overview of cancer drug discovery and development from the bench to the clinic showing with broad strokes and representative examples the drug development process as a network of linked components leading from the discovered target to the ultimate therapeutic product Following a systems biology approach the authors explain genomic databases and how to discover oncological targets from them how then to advance from the gene and transcript to the level of protein biochemistry how next to move from the chemical realm to that of the living cell and ultimately pursue animal modeling and clinical development Emerging cancer therapeutics including Rituxan Erbitux Gleevec Herceptin Avastin ABX EGF Velcade Kepivance Iressa Tarceva and Zevalin are addressed Highlights include cancer genomics pharmacogenomics transcriptomics gene expression analysis proteomic and enzymatic cancer profiling technologies and cellular and animal approaches to cancer target validation DNA Repair and Cancer Srinivasan Madhusudan, David M. Wilson III, 2013-01-22 DNA repair is a rapidly advancing field in biology and these systems represent a major defense mechanism against environmental and intracellular damaging agents such as sunlight ionizing radiation and reactive oxygen species With contributions from eminent researchers this book explores the basics and current trends in this critical field Topics include carcinogenesis as a predictive and or prognostic biomarker for cancer therapy nucleotide excision repair and tumor genetics and personalized medicine The contributions provide essential information to scientists pharmaceutical investigators and clinicians interested in cancer therapy **Locoregional Radionuclide Cancer Therapy** Franklin C.L. Wong, 2020-12-08 This book reviews locoregional radionuclide cancer therapies LRCT Proving an increasingly viable alternative to radiotherapy radionuclide therapy includes a diversity of choices of well characterized biochemical and physiologic target molecules The delivery and retention of radionuclides may be monitored by advanced imaging for exact tissue localization and for real time dosimetry to enable personalized precision medicine Radiopharmaceuticals in human cancer therapies are typically delivered in systemic routes but can also be designed for locoregional routes to harness pharmacokinetic advantages of higher payload and lower systemic toxicities This book explores the latest advancements and clinical considerations of the locoregional approach Throughout the chapters the clinical and scientific bases of cancer treatment and the locoregional use of radionuclides are explored Mathematical models of radiation dosimetry of locoregional radionuclides on tissues are studied using common models for multiple commercially available radionuclides Rodent and

canine tumor models of LRCT are compared for selected radionuclides and radiopharmaceuticals The practical aspects of radiopharmaceuticals production marketing transport as well as radiation protection are reviewed Finally the combination of LRCT with immunotherapy and other cancer therapies and prospective future use of LRCT are discussed This is a guide for practicing nuclear physicians interventional radiologists radiation oncologists radiation scientists veterinarians and oncologists to expand their knowledge base and to prepare for designing locoregional radionuclide cancer therapies in animals and in humans

Timiras,2007-08-16 Extensively revised and updated to reflect the current state of knowledge in the study of aging this Fourth Edition offers a complete profile of the aging process at all levels from molecules and cells to demography and evolution Written by international experts in current basic and clinical aging research this text includes aspects of individual comparative and differential aging and discussions of theories and mechanisms of aging This invaluable reference illustrates how bodily systems organs and functions are affected with aging describes how genetic and environmental factors influence age related changes and addresses some of the clinical consequences of these changes for health and longevity Well illustrated with numerous tables and graphs this book presents up to date information from internationally renowned experts in various bio medical fields

The Molecular Genetics of Lung Cancer David N Cooper,2005-11-20 Lung cancer is the leading cause of cancer mortality in Western countries It also provides an archetypal example of how inherited predisposing genetic variants may interact with an environmental influence smoking to modulate individual cancer risk The Molecular Genetics of Lung Cancer describes how the new techniques methods and approaches of molecular genetics are being used to unravel the complexities of the mechanisms underlying lung tumorigenesis by analysis at the DNA RNA and protein levels with potentially important implications for tumour classification diagnosis prognosis and treatment as well as providing new insights into how lung tumours arise and how they progress to malignancy

Encyclopedia of Cancer Manfred Schwab,2011-10-14 The merging of different basic and clinical science disciplines towards the common goal of fighting against cancer has long ago called for the establishment of a comprehensive reference source both as a tool to close the language gap between clinical and basic science investigators and as a platform of information for students and informed laymen alike The Encyclopedia of Cancer provides rapid access to focused information on all topics of cancer research for clinicians research scientists and advanced students Given the overwhelming success of the Second Edition which appeared in 2009 and fast recent development in the different fields of cancer research it has been decided to publish a third fully revised and expanded edition following the principal concept of the first edition that has proven so successful Recent developments are seeing a dynamic progress in basic and clinical cancer science with translational research increasingly becoming a new paradigm in cancer research In particular new approaches to both Personalized Cancer Medicine and Targeted Therapies have made promising progress While the Second Edition featured scholarly contributions from approximately 1 000 scientists clinicians in four Volumes the Third Edition includes 1 300

contributors in 7 Volumes with an A Z format of approx 7000 entries It provides definitions of common acronyms and short definitions of related terms and processes in the form of keyword entries In addition there are detailed essays which provide comprehensive information on syndromes genes and molecules and processes and methods Each essay is well structured with extensive cross referencing between all entries In the Third Edition topical Essays present a comprehensive picture of major cancers such as Breast Cancer Colorectal Cancer Prostate Cancer Ovarian Cancer Renal Cancer Lung Cancer and Hematological Malignancies Leukemias and Lymphomas For each of these cancers different authoritative Essays are included that cover topics ranging from Pathology to Clinical Oncology and Targeted Therapies This new feature should meet the expectance that a wide community has towards a major cancer reference works The Encyclopedia of Cancer will be accessible both in print and online and this information source should be of value to both the clinical and basic scientific community as well as to the public
